Disqualifications: Hound Breeds

**American English Coonhound**
Undershot, overshot, tri-colored with no ticking, solid color with less than 10% ticking, any brindle color.

**Basset Hound**
Height of more than 15 inches at the highest point of the shoulder blade.
Knuckled over front legs.
Distinctly long coat.

**Beagle**
Any hound measuring more than 15 inches shall be disqualified.

**Black and Tan Coonhound**
A solid patch of white which extends more than one inch in any direction.

**Bluetick Coonhound**
Males under 22 inches or over 27 inches.
Females under 21 inches or over 25 inches.
(Entries in puppy class are not to be disqualified for being undersize.)
Any color other than that described in the standard.
Undershot or overshot.
Albinism.

**Cirneco dell’Etna**
Walleye, an eye with a whitish iris or a blue eye(s); overshot mouth or undershot mouth.
Totally hanging ears or bat ears.
Total depigmentation; self-colored brown or liver, brown patches or hairs; brindle coat; any presence of black - patches, hairs, pigmentation, nails, or mucous membranes.
Height not within the tolerance, dogs under 17 ½ inches or over 20 ½ inches, bitches under 16 inches or over 19 ½ inches.

**Dachshund**
Knuckling over of front legs.

**English Foxhound**
Pig-mouth (overshot) or undershot.

**Ibizan Hound**
Any color other than white or red.

**Norwegian Elkhound**
An overall color other than gray.

**Petit Basset Griffon Vendeen**
Height over 15 inches is a disqualification. Height under 13 inches is a disqualification at one year of age or older.
**Pharaoh Hound**
Any solid white spot on the back of neck, shoulder, or any part of the back or sides of the dog.

**Plott**
Length of ear extending beyond the tip of the nose or hanging bloodhound-like, in long, pendulous fashion.
Splayed feet.

**Portuguese Pondengo Pequenos**
Behavior- Aggressive or overly shy.
Eyes- Of different color.
Jaws- Undershot or overshot.
Ears- Folded or hanging.
Color- Brindle, Black and Tan, Tricolor, Solid White.

**Rhodesian Ridgeback**
Ridgelessness.

**Scottish Deerhound**
White blaze on the head, or a white collar.

**Sloughi**
Ears erect, or small and folding backwards in a “rose ear”.
An overshot or undershot jaw.
Coat too long and/or feathering on the ears, tail, and/or legs.
Color not in accordance with the standard and/or solid white extending above the toes or white anywhere else on the dog except the forechest.

**Whippet**
More than one-half inch above or below stated height limits.
Blue eye(s), any portion of blue in the eye(s), eyes not of the same color.
Undershot.
Overshot one-quarter inch or more.
Any coat other than short, close, smooth and firm in texture.
Official Standard for the Afghan Hound

General Appearance: The Afghan Hound is an aristocrat, his whole appearance one of dignity and aloofness with no trace of plainness or coarseness. He has a straight front, proudly carried head, eyes gazing into the distance as if in memory of ages past. The striking characteristics of the breed-exotic, or "Eastern," expression, long silky topknot, peculiar coat pattern, very prominent hipbones, large feet, and the impression of a somewhat exaggerated bend in the stifle due to profuse trouserings-stand out clearly, giving the Afghan Hound the appearance of what he is, a king of dogs, that has held true to tradition throughout the ages.

Head: The head is of good length, showing much refinement, the skull evenly balanced with the foreface. There is a slight prominence of the nasal bone structure causing a slightly Roman appearance, the center line running up over the foreface with little or no stop, falling away in front of the eyes so there is an absolutely clear outlook with no interference; the underjaw showing great strength, the jaws long and punishing; the mouth level, meaning that the teeth from the upper jaw and lower jaw match evenly, neither overshot nor undershot. This is a difficult mouth to breed. A scissors bite is even more punishing and can be more easily bred into a dog than a level mouth, and a dog having a scissors bite, where the lower teeth slip inside and rest against the teeth of the upper jaw, should not be penalized. The occipital bone is very prominent. The head is surmounted by a topknot of long silky hair. Ears-The ears are long, set approximately on level with outer corners of the eyes, the leather of the ear reaching nearly to the end of the dog's nose, and covered with long silky hair. Eyes-The eyes are almond-shaped (almost triangular), never full or bulgy, and are dark in color. Nose-Nose is of good size, black in color. Faults-Coarseness; snipiness; overshot or undershot; eyes round or bulgy or light in color; exaggerated Roman nose; head not surmounted with topknot.

Neck: The neck is of good length, strong and arched, running in a curve to the shoulders which are long and sloping and well laid back. Faults-Neck too short or too thick; a ewe neck; a goose neck; a neck lacking in substance.

Body: The back line appearing practically level from the shoulders to the loin. Strong and powerful loin and slightly arched, falling away toward the stern, with the hipbones very pronounced; well ribbed and tucked up in flanks. The height at the shoulders equals the distance from the chest to the buttocks; the brisket well let down, and of medium width. Faults-Roach back, swayback, goose rump, slack loin; lack of prominence of hipbones; too much width of brisket, causing interference with elbows.

Tail: Tail set not too high on the body, having a ring, or a curve on the end; should never be curled over, or rest on the back, or be carried sideways; and should never be bushy.

Legs: Forelegs are straight and strong with great length between elbow and pastern; elbows well held in; forefeet large in both length and width; toes well arched; feet covered with long thick hair; fine in texture; pasterns long and straight; pads of feet unusually large and well down on the ground. Shoulders have plenty of angulation so that the legs are well set underneath the dog. Too much straightness of shoulder causes the dog to break down in the pasterns, and this is a serious fault. All four feet of the Afghan Hound are in line with the body, turning either in nor out. The hind feet are broad and of good length; the toes arched, and covered with long thick hair; hindquarters powerful and well muscled, with great length between hip and hock; hocks are well let down; good angulation of both stifle and hock; slightly bowed from hock to crotch. Faults-Front or back feet thrown outward or inward; pads of feet not thick enough; or feet too small; or
any other evidence of weakness in feet; weak or broken down pasterns; too straight in stifle; too long in hock.

**Coat:** Hindquarters, flanks, ribs, forequarters, and legs well covered with thick, silky hair, very fine in texture; ears and all four feet well feathered; from in front of the shoulders; and also backwards from the shoulders along the saddle from the flanks and the ribs upwards, the hair is short and close, forming a smooth back in mature dogs - this is a traditional characteristic of the Afghan Hound. The Afghan Hound should be shown in its natural state; the coat is not clipped or trimmed; the head is surmounted (in the full sense of the word) with a topknot of long, silky hair - that is also an outstanding characteristic of the Afghan Hound. Showing of short hair on cuffs on either front or back legs is permissible. Fault-Lack of shorthaired saddle in mature dogs.

**Height:** Dogs, 27 inches, plus or minus one inch; bitches, 25 inches, plus or minus one inch.

**Weight:** Dogs, about 60 pounds; bitches, about 50 pounds.

**Color:** All colors are permissible, but color or color combinations are pleasing; white markings, especially on the head, are undesirable.

**Gait:** When running free, the Afghan Hound moves at a gallop, showing great elasticity and spring in his smooth, powerful stride. When on a loose lead, the Afghan can trot at a fast pace; stepping along, he has the appearance of placing the hind feet directly in the foot prints of the front feet, both thrown straight ahead. Moving with head and tail high, the whole appearance of the Afghan Hound is one of great style and beauty.

**Temperament:** Aloof and dignified, yet gay. Faults-Sharpness or shyness.

**Approved September 14, 1948**
Official Standard for the American Foxhound

Head: **Skull**—Should be fairly long, slightly domed at occiput, with cranium broad and full. **Ears**—Ears set on moderately low, long, reaching when drawn out nearly, if not quite, to the tip of the nose; fine in texture, fairly broad, with almost entire absence of erectile power-setting close to the head with the forward edge slightly inturning to the cheek-round at tip. **Eyes**—Eyes large, set well apart, soft and houndlike-expression gentle and pleading; of a brown or hazel color. **Muzzle**—Muzzle of fair length-straight and square-cut-the stop moderately defined. Defects-A very flat skull, narrow across the top; excess of dome; eyes small, sharp and terrier-like, or prominent and protruding; muzzle long and snippy, cut away decidedly below the eyes, or very short. Roman-nosed, or upturned, giving a dish-face expression. Ears short, set on high, or with a tendency to rise above the point of origin.

Body: Neck and Throat—**Neck** rising free and light from the shoulders, strong in substance yet not loaded, of medium length. The throat clean and free from folds of skin, a slight wrinkle below the angle of the jaw, however, is allowable. Defects-A thick, short, cloddy neck carried on a line with the top of the shoulders. Throat showing dewlap and folds of skin to a degree termed "throatiness".

Shoulders, Chest and Ribs: Shoulders sloping-clean, muscular, not heavy or loaded-conveying the idea of freedom of action with activity and strength. Chest should be deep for lung space, narrower in proportion to depth than the English hound-28 inches (girth) in a 23-inch hound being good. Well-sprung ribs-back ribs should extend well back-a three-inch flank allowing springiness.

Back and Loins: Back moderately long, muscular and strong. Loins broad and slightly arched. Defects—Very long or swayed or roached back. Flat, narrow loins.

Forelegs and Feet: The forelegs are straight from elbows to feet, well boned and muscular, with pasterns strong, flexible and very slightly sloping. Feet-Fox-like. Pad full and hard. Well-arched toes. Strong nails. Defects—Straight, upright shoulders, chest disproportionately wide or with lack of depth. Flat ribs. Out at elbow. Knees knuckled over forward, or bent backward. Forelegs crooked. Feet long, open or spreading.

Tail: Set moderately high; carried gaily, but not turned forward over the back; with slight curve; with very slight brush. Defects—A long tail, teapot curve or inclined forward from the root. Rat tail, entire absence of brush.

Coat: A close, hard, hound coat of medium length. Defects—A short thin coat, or of a soft quality.

Height: Dogs should not be under 23 or over 28 inches. Bitches should not be under 21 or over 26 inches measured across the back at the point of the withers, the hound standing in a natural position with his feet well under him.

Color: Any color.

Effective March 1, 2011
Official Standard for the American English Coonhound

General Appearance: Renowned for speed and endurance, the American English Coonhound has a strong but racy body, a deep chest with plenty of lung room, a strong back, broad loin and well-defined musculature. A balanced, powerful dog with no exaggerated parts, the American English possesses the grace and attitude of a well-conditioned athlete.

Size, Proportion, Substance: Size-Height-Males-24 to 26 inches at the withers. Females-23 to 25 inches at the withers. Proportion-Measuring from the breast bone to the rear of the thigh and the withers to the ground, the length should be equal or slightly longer than the height measurement. Slightly off square. Substance-Weight in proportion to height so the dog appears capable of an all night hunt.

Muzzle—Rather square, well proportioned in width with the skull. Flews covering the lower jaw from the side view. Planes-The stop forms a right angle with the upper line of the muzzle. A line from occiput to brow is a little above, and parallel to a line from eye to nose. Nose-Black. Faults: Pink or white pigmentation. Bite-Scissors bite with upper incisors fitting closely over the lower. Disqualifications: Undershoot or overshot.

Forequarters: Shoulders and Angulation-Clean, gradually sloped down from the withers to the point of shoulder, muscular, balanced with body, showing freedom of movement and strength. Fault: Protruding shoulders. Forelegs-Straight from side or front view, well boned, set well apart, muscular. Pastern-Strong and straight. Feet-Set directly under leg, round, catlike, well-padded, strong arch over toes. Nails-Strong.

Hindquarters: Angulation-in balance with the forequarters. Legs-Strong, straight when viewed from the rear. Thigh-muscular without being coarse.

Coat: Hard, protective hair. Medium length.

Color: Red and white ticked, blue and white ticked, tri-colored with ticking, red and white, white and black. Disqualifications: Tri-colored with no ticking, solid color with less than 10 percent ticking, any brindle color.

Gait: Effortless trot, with reach and drive, with tail moving side to side. Gives impression of great endurance. Head carried up, but not perpendicular. Expression is alert.

Temperament: Pleasant, alert, confident and sociable with humans and dogs. An avid hunter. Faults: Shyness or timidity.
**Disqualifications:** Undershot, overshot, tri-colored with no ticking, solid color with less than 10 percent ticking, any brindle color.

Approved April 2009  
Effective January 1, 2010
**Official Standard for the Basenji**

**General Appearance:** The Basenji is a small, short haired hunting dog from Africa. It is short backed and lightly built, appearing high on the leg compared to its length. The wrinkled head is proudly carried on a well arched neck and the tail is set high and curled. Elegant and graceful, the whole demeanor is one of poise and inquiring alertness. The balanced structure and the smooth musculature enable it to move with ease and agility. The Basenji hunts by both sight and scent. Characteristics-The Basenji should not bark but is not mute. The wrinkled forehead, tightly curled tail and swift, effortless gait (resembling a racehorse trotting full out) are typical of the breed. Faults-Any departure from the following points must be considered a fault, and the seriousness with which the fault is regarded is to be in exact proportion to its degree.

**Size, Proportion, Substance:** Ideal height for dogs is 17 inches and bitches 16 inches. Dogs 17 inches and bitches 16 inches from front of chest to point of buttocks. Approximate weight for dogs, 24 pounds and bitches, 22 pounds. Lightly built within this height to weight ratio.

**Head:** The head is proudly carried. **Eyes**-Dark hazel to dark brown, almond shaped, obliquely set and farseeing. Rims dark. **Ears**-Small, erect and slightly hooded, of fine texture and set well forward on top of head. The skull is flat, well chiseled and of medium width, tapering toward the eyes. The foreface tapers from eye to muzzle with a perceptible stop. **Muzzle** shorter than skull, neither coarse nor snipy, but with rounded cushions. Wrinkles appear upon the forehead when ears are erect, and are fine and profuse. Side wrinkles are desirable, but should never be exaggerated into dewlap. Wrinkles are most noticeable in puppies, and because of lack of shadowing, less noticeable in blacks, tricolors and brindles. Nose-Black greatly desired. Teeth-Evenly aligned with a scissors bite.

**Neck, Topline, Body:** **Neck** of good length, well crested and slightly full at base of throat. Well set into shoulders. **Topline**-Back level. **Body**-Balanced with a short back, short coupled and ending in a definite waist. Ribs moderately sprung, deep to elbows and oval. Slight forechest in front of point of shoulder. Chest of medium width. **Tail** is set high on topline, bends acutely forward and lies well curled over to either side.

**Forequarters:** Shoulders moderately laid back. Shoulder blade and upper arm of approximately equal length. Elbows tucked firmly against brisket. Legs straight with clean fine bone, long forearm and well defined sinews. Pasterns of good length, strong and flexible. Feet-Small, oval and compact with thick pads and well arched toes. Dewclaws are usually removed.

**Hindquarters:** Medium width, strong and muscular, hocks well let down and turned neither in nor out, with long second thighs and moderately bent stifles. Feet-Same as in "Forequarters."

**Coat and Color:** Coat short and fine. Skin very pliant. Color-Chestnut red; pure black; tricolor (pure black and chestnut red); or brindle (black stripes on a background of chestnut red); all with white feet, chest and tail tip. White legs, blaze and collar optional. The amount of white should never predominate over primary color. Color and markings should be rich, clear and well-defined, with a distinct line of demarcation between the black and red of tricolors and the stripes of brindles.

**Gait:** Swift, tireless trot. Stride is long, smooth, effortless and the topline remains level. Coming and going, the straight column of bones from shoulder joint to foot and from hip joint to pad remains unbroken, converging toward the centerline under the body. The faster the trot, the greater the convergence.
Temperament: An intelligent, independent, but affectionate and alert breed. Can be aloof with strangers.

Approved May 8, 1990
Effective June 28, 1990
Official Standard for the Basset Hound

General Appearance: The Basset Hound possesses in marked degree those characteristics which equip it admirably to follow a trail over and through difficult terrain. It is a short-legged dog, heavier in bone, size considered, than any other breed of dog, and while its movement is deliberate, it is in no sense clumsy. In temperament it is mild, never sharp or timid. It is capable of great endurance in the field and is extreme in its devotion.

Head: The head is large and well proportioned. Its length from occiput to muzzle is greater than the width at the brow. In overall appearance the head is of medium width. The skull is well domed, showing a pronounced occipital protuberance. A broad flat skull is a fault. The length from nose to stop is approximately the length from stop to occiput. The sides are flat and free from cheek bumps. Viewed in profile the top lines of the muzzle and skull are straight and lie in parallel planes, with a moderately defined stop. The skin over the whole of the head is loose, falling in distinct wrinkles over the brow when the head is lowered. A dry head and tight skin are faults. The muzzle is deep, heavy, and free from snipiness. The nose is darkly pigmented, preferably black, with large wide-open nostrils. A deep liver-colored nose conforming to the coloring of the head is permissible but not desirable. The teeth are large, sound, and regular, meeting in either a scissors or an even bite. A bite either overshot or undershot is a serious fault. The lips are darkly pigmented and are pendulous, falling squarely in front and, toward the back, in loose hanging flews. The dewlap is very pronounced. The neck is powerful, of good length, and well arched. The eyes are soft, sad, and slightly sunken, showing a prominent haw, and in color are brown, dark brown preferred. A somewhat lighter-colored eye conforming to the general coloring of the dog is acceptable but not desirable. Very light or protruding eyes are faults. The ears are extremely long, low set, and when drawn forward, fold well over the end of the nose. They are velvety in texture, hanging in loose folds with the ends curling slightly inward. They are set far back on the head at the base of the skull and, in repose, appear to be set on the neck. A high set or flat ear is a serious fault.

Forequarters: The chest is deep and full with prominent sternum showing clearly in front of the legs. The shoulders and elbows are set close against the sides of the chest. The distance from the deepest point of the chest to the ground, while it must be adequate to allow free movement when working in the field, is not to be more than one-third the total height at the withers of an adult Basset. The shoulders are well laid back and powerful. Steepness in shoulder, fiddle fronts, and elbows that are out, are serious faults. The forelegs are short, powerful, heavy in bone, with wrinkled skin. Knuckling over of the front legs is a disqualification. The paw is massive, very heavy with tough heavy pads, well rounded and with both feet inclined equally a trifle outward, balancing the width of the shoulders. Feet down at the pastern are a serious fault. The toes are neither pinched together nor splayed, with the weight of the forepart of the body borne evenly on each. The dewclaws may be removed.

Body: The rib structure is long, smooth, and extends well back. The ribs are well sprung, allowing adequate room for heart and lungs. Flatsidedness and flanged ribs are faults. The topline is straight, level, and free from any tendency to sag or roach, which are faults.

Hindquarters: The hindquarters are very full and well rounded, and are approximately equal to the shoulders in width. They must not appear slack or light in relation to the overall depth of the body. The dog stands firmly on its hind legs showing a well-let-down stifle with no tendency toward a crouching stance. Viewed from behind, the hind legs are parallel, with the hocks
turning neither in nor out. Cowhocks or bowed legs are serious faults. The hind feet point straight ahead. Steep, poorly angulated hindquarters are a serious fault. The dewclaws, if any, may be removed.

**Tail:** The tail is not to be docked, and is set in continuation of the spine with but slight curvature, and carried gaily in hound fashion. The hair on the underside of the tail is coarse.

**Size:** The height should not exceed 14 inches. Height over 15 inches at the highest point of the shoulder blade is a disqualification.

**Gait:** The Basset Hound moves in a smooth, powerful, and effortless manner. Being a scenting dog with short legs, it holds its nose low to the ground. Its gait is absolutely true with perfect coordination between the front and hind legs, and it moves in a straight line with hind feet following in line with the front feet, the hocks well bent with no stiffness of action. The front legs do not paddle, weave, or overlap, and the elbows must lie close to the body. Going away, the hind legs are parallel.

**Coat:** The coat is hard, smooth, and short, with sufficient density to be of use in all weather. The skin is loose and elastic. A distinctly long coat is a disqualification.

**Color:** Any recognized hound color is acceptable and the distribution of color and markings is of no importance.

**Disqualifications:** Height of more than 15 inches at the highest point of the shoulder blade. Knuckled over front legs. Distinctly long coat.

**Approved January 14, 1964**
Official Standard for the Beagle

Head: The skull should be fairly long, slightly domed at occiput, with cranium broad and full. Ears-Ears set on moderately low, long, reaching when drawn out nearly, if not quite, to the end of the nose; fine in texture, fairly broad-with almost entire absence of erectile power-setting close to the head, with the forward edge slightly inturning to the cheek-rounded at tip. Eyes-Eyes large, set well apart-soft and houndlike-expression gentle and pleading; of a brown or hazel color. Muzzle-Muzzle of medium length-straight and square-cut-the stop moderately defined. Jaws-Level. Lips free from flews; nostrils large and open. Defects-A very flat skull, narrow across the top; excess of dome, eyes small, sharp and terrierlike, or prominent and protruding; muzzle long, snipy or cut away decidedly below the eyes, or very short. Roman-nosed, or upturned, giving a dish-face expression. Ears short, set on high or with a tendency to rise above the point of origin.

Body: Neck and Throat-Neck rising free and light from the shoulders strong in substance yet not loaded, of medium length. The throat clean and free from folds of skin; a slight wrinkle below the angle of the jaw, however, may be allowable. Defects-A thick, short, cloddy neck carried on a line with the top of the shoulders. Throat showing dewlap and folds of skin to a degree termed "throatiness."

Shoulders and Chest: Shoulders sloping-clean, muscular, not heavy or loaded-conveying the idea of freedom of action with activity and strength. Chest deep and broad, but not broad enough to interfere with the free play of the shoulders. Defects-Straight, upright shoulders. Chest disproportionately wide or with lack of depth.

Back, Loin and Ribs: Back short, muscular and strong. Loin broad and slightly arched, and the ribs well sprung, giving abundance of lung room. Defects-Very long or swayed or roached back. Flat, narrow loin. Flat ribs.

Forelegs and Feet: Forelegs-Straight, with plenty of bone in proportion to size of the hound. Pasterns short and straight. Feet-Close, round and firm. Pad full and hard. Defects-Out at elbows. Knees knuckled over forward, or bent backward. Forelegs crooked or Dachshundlike. Feet long, open or spreading.

Hips, Thighs, Hind Legs and Feet: Hips and thighs strong and well muscled, giving abundance of propelling power. Stifles strong and well let down. Hocks firm, symmetrical and moderately bent. Feet close and firm. Defects-Cowhocks, or straight hocks. Lack of muscle and propelling power. Open feet.

Tail: Set moderately high; carried gaily, but not turned forward over the back; with slight curve; short as compared with size of the hound; with brush. Defects-A long tail. Teapot curve or inclined forward from the root. Rat tail with absence of brush.

Coat: A close, hard, hound coat of medium length. Defects-A short, thin coat, or of a soft quality.

Color: Any true hound color.

General Appearance: A miniature Foxhound, solid and big for his inches, with the wear-and-tear look of the hound that can last in the chase and follow his quarry to the death.
Scale of Points

*Head*
- Skull: 5
- Ears: 10
- Eyes: 5
- Muzzle: 5

*Body*
- Neck: 5
- Chest and shoulders: 15
- Back, loin and ribs: 15

*Running Gear*
- Forelegs: 10
- Hips, thighs and hind legs: 10
- Feet: 10
- Coat: 5
- Stern: 5

Total: 100

**Varieties:** There shall be two varieties: Thirteen Inch—which shall be for hounds not exceeding 13 inches in height. Fifteen Inch—which shall be for hounds over 13 but not exceeding 15 inches in height.

**Disqualification:** Any hound measuring more than 15 inches shall be disqualified.

**Packs of Beagles**

**Score of Points for Judging**

*Hounds*
- General levelness of pack: 40%
- Individual merit of hounds: 30%
  70%
- Manners: 20%
- Appointments: 10%

Total: 100%

**Levelness of Pack:** The first thing in a pack to be considered is that they present a unified appearance. The hounds must be as near to the same height, weight, conformation and color as possible.
**Individual Merit of the Hounds:** Is the individual bench-show quality of the hounds. A very level and sporty pack can be gotten together and not a single hound be a good Beagle. This is to be avoided.

**Manners:** The hounds must all work gaily and cheerfully, with flags up-obeying all commands cheerfully. They should be broken to heel up, kennel up, follow promptly and stand. Cringing, sulking, lying down to be avoided. Also, a pack must not work as though in terror of master and whips. In Beagle packs it is recommended that the whip be used as little as possible.

**Appointments:** Master and whips should be dressed alike, the master or huntsman to carry horn-the whips and master to carry light thong whips. One whip should carry extra couplings on shoulder strap.

**Recommendations for Show Livery:** Black velvet cap, white stock, green coat, white breeches or knickerbockers, green or black stockings, white spats, black or dark brown shoes. Vest and gloves optional. Ladies should turn out exactly the same except for a white skirt instead of white breeches.

**Approved September 10, 1957**
Official Standard for the Black and Tan Coonhound

General Appearance: The Black and Tan Coonhound is first and fundamentally a working dog, a trail and tree hound, capable of withstanding the rigors of winter, the heat of summer, and the difficult terrain over which he is called upon to work. Used principally for trailing and treeing raccoon, the Black and Tan Coonhound runs his game entirely by scent. The characteristics and courage of the Coonhound also make him proficient on the hunt for deer, bear, mountain lion and other big game. Judges are asked by the club sponsoring the breed to place great emphasis upon these facts when evaluating the merits of the dog. The general impression is that of power, agility and alertness. He immediately impresses one with his ability to cover the ground with powerful rhythmic strides.

Size, Proportion, Substance: Size measured at the shoulder-Males 25 to 27 inches; females 23 to 25 inches. Oversized dogs should not be penalized when general soundness and proportion are in favor. Penalize undersize. Proportion—Measured from the point of shoulder to the buttocks and from withers to ground the length of body is equal to or slightly greater than the height of the dog at the withers. Height is in proportion to general conformation so that dog appears neither leggy nor close to the ground. Substance—Considering their job as a hunting dog, the individual should exhibit moderate bone and good muscle tone. Males are heavier in bone and muscle tone than females.

Head: The head is cleanly modeled. From the back of the skull to the nose the head measures from 9 to 10 inches in males and from 8 to 9 inches in females. Expression is alert, friendly and eager. The skin is devoid of folds. Nostrils well open and always black. The flews are well developed with typical hound appearance. Penalize excessive wrinkles. Eyes are from hazel to dark brown in color, almost round and not deeply set. Penalize yellow or light eyes. Ears are low set and well back. They hang in graceful folds, giving the dog a majestic appearance. In length they extend naturally well beyond the tip of the nose and are set at eye level or lower. Penalize ears that do not reach the tip of the nose and are set too high on the head. Skull tends toward oval outline. Medium stop occurring midway between occiput bone and nose. Viewed from profile the line of the skull is on a practically parallel plane to the foreface or muzzle. Teeth fit evenly with scissors bite. Penalize excessive deviation from scissors bite.

Neck, Topline, Body: The neck is muscular, sloping, medium length. The skin is devoid of excess dewlap. The back is level, powerful and strong. The dog possesses full, round, well sprung ribs, avoiding flatsidedness. Chest reaches at least to the elbows. The tail is strong, with base slightly below level of backbone, carried free and when in action at approximately right angle to back.

Forequarters: Powerfully constructed shoulders. The forelegs are straight, with elbows turning neither in nor out; pasterns strong and erect. Feet are compact, with well knuckled, strongly arched toes and thick, strong pads. Penalize flat or splayed feet.

Hindquarters: Quarters are well boned and muscled. From hip to hock long and sinewy, hock to pad short and strong. Stifles and hocks well bent and not inclining either in or out. When standing on a level surface, the hind feet are set back from under the body and the leg from pad to hock is at right angles to the ground. Fault—Rear dewclaws.

Coat: The coat is short but dense to withstand rough going.

Color: As the name implies, the color is coal black with rich tan markings above eyes, on sides of muzzle, chest, legs and breeching, with black pencil markings on toes. Penalize lack of rich
tan markings, excessive areas of tan markings, excessive black coloration. Faults-White on chest or other parts of body is highly undesirable, and a solid patch of white which extends more than one inch in any direction is a disqualification.

**Gait:** When viewed from the side, the stride of the Black and Tan Coonhound is easy and graceful with plenty of reach in front and drive behind. When viewed from the front the forelegs, which are in line with the width of the body, move forward in an effortless manner, but never cross. Viewed from the rear the hocks follow on a line with the forelegs, being neither too widely nor too closely spaced, and as the speed of the trot increases the feet tend to converge toward a centerline or single track indicating soundness, balance and stamina. When in action, his head and tail carriage is proud and alert; the topline remains level.

**Temperament:** Even temperament, outgoing and friendly. As a working scent hound, must be able to work in close contact with other hounds. Some may be reserved but never shy or vicious. Aggression toward people or other dogs is most undesirable.

Note-Inasmuch as this is a hunting breed, scars from honorable wounds shall not be considered faults.

**Disqualification:** A solid patch of white which extends more than one inch in any direction.

Approved December 11, 1990
Effective January 30, 1991
Official Standard for the Bloodhound

General Character: The Bloodhound possesses, in a most marked degree, every point and characteristic of those dogs which hunt together by scent (Sagaces). He is very powerful, and stands over more ground than is usual with hounds of other breeds. The skin is thin to the touch and extremely loose, this being more especially noticeable about the head and neck, where it hangs in deep folds.

Height: The mean average height of adult dogs is 26 inches, and of adult bitches 24 inches. Dogs usually vary from 25 to 27 inches, and bitches from 23 to 25 inches; but, in either case, the greater height is to be preferred, provided that character and quality are also combined.

Weight: The mean average weight of adult dogs, in fair condition, is 90 pounds, and of adult bitches 80 pounds. Dogs attain the weight of 110 pounds, bitches 100 pounds. The greater weights are to be preferred, provided (as in the case of height) that quality and proportion are also combined.

Expression: The expression is noble and dignified, and characterized by solemnity, wisdom, and power.

Temperament: In temperament he is extremely affectionate, neither quarrelsome with companions nor with other dogs. His nature is somewhat shy, and equally sensitive to kindness or correction by his master.

Head: The head is narrow in proportion to its length, and long in proportion to the body, tapering but slightly from the temples to the end of the muzzle, thus (when viewed from above and in front) having the appearance of being flattened at the sides and of being nearly equal in width throughout its entire length. In profile the upper outline of the skull is nearly in the same plane as that of the foreface. The length from end of nose to stop (midway between the eyes) should be not less than that from stop to back of occipital protuberance (peak). The entire length of head from the posterior part of the occipital protuberance to the end of the muzzle should be 12 inches, or more, in dogs, and 11 inches, or more, in bitches. Skull—The skull is long and narrow, with the occipital peak very pronounced. The brows are not prominent, although, owing to the deep-set eyes, they may have that appearance. Foreface—The foreface is long, deep, and of even width throughout, with square outline when seen in profile. Eyes—The eyes are deeply sunk in the orbits, the lids assuming a lozenge or diamond shape, in consequence of the lower lids being dragged down and everted by the heavy flews. The eyes correspond with the general tone of color of the animal, varying from deep hazel to yellow. The hazel color is, however, to be preferred, although very seldom seen in liver-and-tan hounds. Ears—The ears are thin and soft to the touch, extremely long, set very low, and fall in graceful folds, the lower parts curling inward and backward. Mouth—A scissors bite is preferred, level bite accepted.

Wrinkle: The head is furnished with an amount of loose skin, which in nearly every position appears superabundant, but more particularly so when the head is carried low; the skin then falls into loose, pendulous ridges and folds, especially over the forehead and sides of the face. Nostrils—The nostrils are large and open. Lips, Flews, and Dewlap—In front the lips fall squarely, making a right angle with the upper line of the foreface; whilst behind they form deep, hanging flews, and, being continued into the pendant folds of loose skin about the neck, constitute the dewlap, which is very pronounced. These characteristics are found, though in a lesser degree, in the bitch.
Neck, Shoulders and Chest: The neck is long, the shoulders muscular and well sloped backwards; the ribs are well sprung; and the chest well let down between the forelegs, forming a deep keel.

Legs and Feet: The forelegs are straight and large in bone, with elbows squarely set; the feet strong and well knuckled up; the thighs and second thighs (gaskins) are very muscular; the hocks well bent and let down and squarely set.

Back and Loin: The back and loins are strong, the latter deep and slightly arched. Stern-The stern is long and tapering, and set on rather high, with a moderate amount of hair underneath.

Gait: The gait is elastic, swinging and free, the stern being carried high, but not too much curled over the back.

Color: The colors are black and tan, liver and tan, and red; the darker colors being sometimes interspersed with lighter or badger-colored hair, and sometimes flecked with white. A small amount of white is permissible on chest, feet, and tip of stern.

Approved: January 9, 1996
Effective: February 29, 1996
Official Standard for the Bluetick Coonhound

General Appearance: The Bluetick should have the appearance of a speedy and well-muscled hound. He never appears clumsy or overly chunky in build. He has a neat, compact body, a glossy coat and clear, keen eyes. In motion he carries his head and tail well up.

Size, Proportion, Substance: Height at withers for adult males, 22 to 27 inches. For adult females, 21 to 25 inches. Weight for males 55 to 80 pounds, females 45 to 65 pounds.

Proportion (measured from point of shoulder to base of tail and withers to ground) is square or slightly longer than tall. Disqualifications: Males under 22 inches or over 27 inches. Females under 21 inches or over 25 inches. (Entries in puppy class are not to be disqualified for being undersize.)

Head: The head is broad between the ears with a slightly domed skull. Total length of head from occiput to end of nose is 9 to 10 inches in males and 8 to 9 inches in females. Stop is prominent. Muzzle is long, broad and deep, square in profile with flews that well cover the line of the lower jaw. Depth of foreface should be 3 to 4½ inches. Eyes—rather large, set wide apart in skull. Round in shape and dark brown in color (never lighter than light brown). Eye rims tight and close fitting. No excess third eyelid should be apparent. Expression is a typical pleading hound expression, never wild or cowering. Ears—set low and devoid of erectile power. Should be thin with a slight roll, taper well towards a point, and reach well towards the end of the nose when pulled forward. Well attached to head to prevent hanging or backward tilt. Nose—large with well-opened nostrils. Fully pigmented, black in color. Teeth—scissors bite preferred, even bite acceptable. Undershot or overshot are disqualifying faults. Disqualifications: undershot or overshot.

Neck, Topline, Body: Neck—muscular and of moderate length, tapering slightly from shoulders to head. Carried well up but not vertical (goose necked). Throat clean with only a slight trace of dewlap.

Body—the body should show considerable depth (extending well down toward the elbow), rather than excessive width, to allow for plenty of lung space. Forechest is moderate, fairly even with the point of the shoulder. Girth of chest for males is 26 to 34 inches, for females 23 to 30 inches. Ribs are long and well-sprung, tapering gradually towards a moderate tuck-up. Back is muscular and topline slopes downward slightly from withers to hips. Loin is broad, well-muscled and slightly arched.

Forequarters: Legs are straight from elbows to feet, well boned and muscular, with strong, straight, slightly sloping pasterns. Legs should appear straight from either side or front view. Length of leg from elbow to ground is approximately one half the height at the withers. Shoulders are clean and sloping, muscular but not too broad or rough, giving the appearance of freedom of movement and strength.

Hindquarters: Hips are strong and well muscled, not quite as wide as ribcage. Thighs have great muscular development for an abundance of propelling power. Breeching full and clean down to hock. Hocks are strong and moderately bent. Dewclaws are removed. Rear legs are parallel from hip to foot when viewed from behind (no cowhocks).

Feet: Round (cat-like) with well arched toes and thick, tough pads.

Tail: Set on slightly below the line of the back, strongly rooted and tapering to a moderate length (in balance to the overall length of the hound). Carried high with a forward half-moon curve. Well coated but without flag.
Coat: Medium coarse and lying close to the body, appearing smooth and glossy. Not rough or too short.

Color: Preferred color is a dark blue, thickly mottled body, spotted by various shaped black spots on back, ears and sides. Preference is to more blue than black on body. Head and ears predominately black. With or without tan markings (over eyes, on cheeks, chest and below tail) and red ticking on feet and lower legs. A fully blue mottled body is preferred over light ticking on the body. There should be more blue ticking than white in the body coat. No other colors allowed. Disqualifications: Any color other than that described in the standard. Albinism.

Gait: Active and vigorous, with topline carried firmly and head and tail well up.

Characteristics: Active, ambitious and speedy on the trail. The Bluetick should be a free tonguer on trail, with a medium bawl or bugle voice when striking and trailing, which may change to a steady chop when running and a steady coarse chop at the tree.

Disqualifications: Males under 22 inches or over 27 inches. Females under 21 inches or over 25 inches.

(Entries in puppy class are not to be disqualified for being undersize.) Any color other than that described in the standard. Undershot or overshot. Albinism.

Approved November 2007
Effective July 1, 2008
Official Standard for the Borzoi

General Appearance: The Borzoi was originally bred for the coursing of wild game on more or less open terrain, relying on sight rather than scent. To accomplish this purpose, the Borzoi needed particular structural qualities to chase, catch and hold his quarry. Special emphasis is placed on sound running gear, strong neck and jaws, courage and agility, combined with proper condition. The Borzoi should always possess unmistakable elegance, with flowing lines, graceful in motion or repose. Males, masculine without coarseness; bitches, feminine and refined.

Head: Skull slightly domed, long and narrow, with scarcely any perceptible stop, inclined to be Roman-nosed. Jaws long, powerful and deep, somewhat finer in bitches but not snipy. Teeth strong and clean with either an even or a scissors bite. Missing teeth should be penalized. Nose large and black.

Ears: Small and fine in quality, lying back on the neck when in repose with the tips when thrown back almost touching behind occiput; raised when at attention.

Eyes: Set somewhat obliquely, dark in color, intelligent but rather soft in expression; never round, full nor staring, nor light in color; eye rims dark; inner corner midway between tip of nose and occiput.

Neck: Clean, free from throatiness; slightly arched, very powerful and well set on.

Shoulders: Sloping, fine at the withers and free from coarseness or lumber.

Chest: Rather narrow, with great depth of brisket.

Ribs: Only slightly sprung, but very deep giving room for heart and lung play.

Back: Rising a little at the loins in a graceful curve.

Loins: Extremely muscular, but rather tucked up, owing to the great depth of chest and comparative shortness of back and ribs.

Forelegs: Bones straight and somewhat flattened like blades, with the narrower edge forward. The elbows have free play and are turned neither in nor out. Pasterns strong.

Feet: Hare-shaped, with well-arched knuckles, toes close and well padded.

Hindquarters: Long, very muscular and powerful with well bent stifles; somewhat wider than the forequarters; strong first and second thighs; hocks clean and well let down; legs parallel when viewed from the rear.

Dewclaws: Dewclaws, if any, on the hind legs are generally removed; dewclaws on the forelegs may be removed.

Tail: Long, set on and carried low in a graceful curve.

Coat: Long, silky (not woolly), either flat, wavy or rather curly. On the head, ears and front of legs it should be short and smooth; on the neck the frill should be profuse and rather curly. Feather on hindquarters and tail, long and profuse, less so on chest and back of forelegs.

Color: Any color, or combination of colors, is acceptable.

Size: Mature males should be at least 28 inches at the withers and mature bitches at least 26 inches at the withers. Dogs and bitches below these respective limits should be severely penalized; dogs and bitches above the respective limits should not be penalized as long as extra size is not acquired at the expense of symmetry, speed and staying quality. Range in weight for males from 75 to 105 pounds and for bitches from 15 to 20 pounds less.

Gait: Front legs must reach well out in front with pasterns strong and springy. Hackneyed motion with mincing gait is not desired nor is weaving and crossing. However, while the hind
legs are wider apart than the front, the feet tend to move closer to the center line when the dog moves at a fast trot. When viewed from the side there should be a noticeable drive with a ground-covering stride from well-angulated stifles and hocks. The overall appearance in motion should be that of effortless power, endurance, speed, agility, smoothness and grace.

Faults: The foregoing description is that of the ideal Borzoi. Any deviation from the above described dog must be penalized to the extent of the deviation, keeping in mind the importance of the contribution of the various features toward the basic original purpose of the breed.

Approved June 13, 1972
Official Standard of the Cirneco dell’Etna

General Appearance: Medium sized hunting dog, elegant, slender build but strong and hardy. Long limbed, of light construction and square outline with a fine coat and upright ears always alert. The following description is that of the ideal Cirneco dell’Etna. Any deviation from the below described dog must be penalized to the extent of the deviation.

Size, Proportion, Substance: Height - Dogs 18 to 19½ inches, tolerance 17½ to 20½ inches; bitches 16½ to 19 inches, tolerance 16 to 19½ inches. Height not within the tolerance, dogs under 17½ inches or over 20½ inches, bitches under 16 inches over 19½ inches, is a disqualification. Length from point of shoulder to haunch bone equal to height at withers.

Head: Expression - Alert expression. Eyes - Relatively small, oval in shape, semi-lateral position. Amber or ochre blending with coat. Pigmentation of the eyelid rims corresponding to the color of the nose. Brown or yellow iris is a fault to be severely penalized. Walleye, an eye with a whitish iris or a blue eye(s) is a disqualification. Ears - Set very high and close together, upright and rigid, parallel or almost parallel when alert. Triangular shape with narrow tip. Length not more than half the head. Totally hanging ears or bat ears are a disqualification. Skull - Width of skull no more than one half the length of head, in profile almost flat. Lean and well chiseled. Stop - Slight stop. Muzzle - Length of muzzle equal to or only slightly less than length of skull. Planes - Top of skull and foreface parallel or slightly divergent. Nose - Bridge of nose straight. Nose rather large, flesh colored, blending with coat. Cheeks - Flat cheeks. Mouth - Lower jaw lightly developed with receding chin. Overshot mouth or undershot mouth is a disqualification. Lips - Thin, taut lips, just covering the teeth of the lower jaw. Bite - Regular and complete scissor bite, i.e. upper teeth closely overlapping lower teeth and set square to the jaws. Teeth - Full dentition desirable.

Neck, Topline and Body: Neck - Length same as the head. Strong, clean, well arched and muscular. Set well into shoulders. Topline - Straight topline sloping from withers towards croup.

Body - Chest - Reaches to, or nearly to, the elbow, without going beyond. Ribs - Slightly sprung, narrow but never flat. Underline & Tuck-up - Clean, gently rising underline, lean without excessive tuck-up. Back - Upper profile straight, without conspicuous muscles, the length is approximately three times the length of the loin. Loin - Length of loin is approximately one fifth of the height at the withers and its width is nearly the same as its length. Short, slightly developed muscles but firm. Width of loin is close to length. Croup - Croup has flat profile, sloping steeply downwards to root of tail. Tail - Low set, fairly thick at base, reaching to point of hock. Of equal thickness for most of its length. Carried high and curved when dog is in action; sabre fashion when in repose. Hair on tail is semi-long and close. Tail curled over the back is a fault to be severely penalized.

Forequarters: Angulation - Shoulder blade (scapulum) to horizontal 55 to 60 degrees. Shoulders - Strong, long, moderately laid back. Shoulder blades - Upper tips close together. Length close to one-third the height at the withers. Upper Arm - Length of upper arm slightly less than length of shoulder blade. Elbow - Level or below the line of the brisket and well tucked in. Legs - Forelegs straight and parallel when viewed from the front. Pasterns - Strong and slightly sloping. Dewclaws - May not be removed.

Hindquarters: Strong and muscular. Limbs parallel when viewed from behind. Angulation -
Not excessively angulated. In profile a vertical line from rear point of buttock to ground close to or touching the tips of the toes. Angle between pelvis and upper thigh is about 115 degrees. Legs - Upper thigh - Broad, long, upper thigh with flat muscles. Stifle - Moderate bend of stifle. Second thigh - Slightly shorter than the upper thigh. Lean and distinct musculature with light bone structure. Groove at Achilles tendon well marked. Hock joint - Angle at the joint is about 145 degrees. Hocks - Wide outer surface, cylindrical shape and vertical position. Length from sole of foot to point of hock is just over a quarter of the height at the withers. Dewclaws - Absent.

**Feet:** Strong, well knuckled, firm, slightly oval, turning neither in nor out. Pads - Well padded, hard and of the same color as the nails. Nails - Brown or flesh colored. Black nails are a disqualification.

**Coat:** Short on head, ears and legs. Short to semi-long (about 1¼ inch) on body, but sleek and close, ranging from fine to slightly coarse. No feathering.

**Color:** Self-colored light to dark shades of tan or chestnut. With a mixture of slightly lighter and darker hairs, or with more or less extensive white. White collar, self-colored white or white with orange patches is less desired. Total depigmentation, self-colored brown or liver; brown patches or hairs; brindle coat or any presence of black patches, hairs, pigmentation or mucous membranes are a disqualification.

**Gait:** Springy trot without excessive extension. Viewed from behind, hind legs track the forelegs. Tendency to throw feet sideways or hackney action undesirable.

**Temperament:** Strong, lively, independent temperament. Gentle and affectionate.

**Disqualifications:** Walleye, an eye with a whitish iris or a blue eye(s); overshot mouth or undershot mouth. Totally hanging ears or bat ears. Total depigmentation; self-colored brown or liver; brown patches or hairs; brindle coat; any presence of black - patches, hairs, pigmentation, nails, or mucous membranes. Height not within the tolerance, dogs under 17½ inches or over 20½ inches, bitches under 16 inches over 19½ inches.

Approved April 12, 2012
Effective June 27, 2012
Official Standard of the Dachshund

General Appearance: Low to ground, long in body and short of leg, with robust muscular development; the skin is elastic and pliable without excessive wrinkling. Appearing neither crippled, awkward, nor cramped in his capacity for movement, the Dachshund is well-balanced with bold and confident head carriage and intelligent, alert facial expression. His hunting spirit, good nose, loud tongue and distinctive build make him well-suited for below-ground work and for beating the bush. His keen nose gives him an advantage over most other breeds for trailing. NOTE: Inasmuch as the Dachshund is a hunting dog, scars from honorable wounds shall not be considered a fault.

Size, Proportion, Substance: Bred and shown in two sizes, standard and miniature; miniatures are not a separate classification but compete in a class division for "11 pounds and under at 12 months of age and older." Weight of the standard size is usually between 16 and 32 pounds.

Head: Viewed from above or from the side, the head tapers uniformly to the tip of the nose. The eyes are of medium size, almond-shaped and dark-rimmed, with an energetic, pleasant expression; not piercing; very dark in color. The bridge bones over the eyes are strongly prominent. Wall eyes, except in the case of dappled dogs, are a serious fault. The ears are set near the top of the head, not too far forward, of moderate length, rounded, not narrow, pointed, or folded. Their carriage, when animated, is with the forward edge just touching the cheek so that the ears frame the face. The skull is slightly arched, neither too broad nor too narrow, and slopes gradually with little perceptible stop into the finely-formed, slightly arched muzzle, giving a Roman appearance. Lips are tightly stretched, well covering the lower jaw. Nostrils well open. Jaws opening wide and hinged well back of the eyes, with strongly developed bones and teeth. Teeth-Powerful canine teeth; teeth fit closely together in a scissors bite. An even bite is a minor fault. Any other deviation is a serious fault.

Neck: Long, muscular, clean-cut, without dewlap, slightly arched in the nape, flowing gracefully into the shoulders without creating the impression of a right angle.

Trunk: The trunk is long and fully muscled. When viewed in profile, the back lies in the straightest possible line between the withers and the short, very slightly arched loin. A body that hangs loosely between the shoulders is a serious fault. Abdomen-Slightly drawn up.

Forequarters: For effective underground work, the front must be strong, deep, long and cleanly muscled. Forequarters in detail: Chest - The breast-bone is strongly prominent in front so that on either side a depression or dimple appears. When viewed from the front, the thorax appears oval and extends downward to the mid-point of the forearm. The enclosing structure of the well-sprung ribs appears full and oval to allow, by its ample capacity, complete development of heart and lungs. The keel merges gradually into the line of the abdomen and extends well beyond the front legs. Viewed in profile, the lowest point of the breast line is covered by the front leg. Shoulder blades-long, broad, well-laid back and firmly placed upon the fully developed thorax, closely fitted at the withers, furnished with hard yet pliable muscles. Upper Arm-Ideally the same length as the shoulder blade and at right angles to the latter, strong of bone and hard of muscle, lying close to the ribs, with elbows close to the body, yet capable of free movement. Forearm-Short; supplied with hard yet pliable muscles on the front and outside, with tightly stretched tendons on the inside and at the back, slightly curved inwards. The joints between the forearms and the feet (wrists) are closer together than the shoulder joints, so that the front does not appear absolutely straight. The inclined shoulder blades, upper arms and curved forearms
form parentheses that enclose the ribcage, creating the correct "wraparound front." Knuckling over is a disqualifying fault. Feet - Front paws are full, tight, compact, with well-arched toes and tough, thick pads. They may be equally inclined a trifle outward. There are five toes, four in use, close together with a pronounced arch and strong, short nails. Front dewclaws may be removed. **Hindquarters:** Strong and cleanly muscled. The pelvis, the thigh, the second thigh, and the rear pastern are ideally the same length and give the appearance of a series of right angles. From the rear, the thighs are strong and powerful. The legs turn neither in nor out. Rear pasterns - Short and strong, perpendicular to the second thigh bone. When viewed from behind, they are upright and parallel. Feet-Hind Paws - Smaller than the front paws with four compactly closed and arched toes with tough, thick pads. The entire foot points straight ahead and is balanced equally on the ball and not merely on the toes. Rear dewclaws should be removed. Croup- Long, rounded and full, sinking slightly toward the tail. **Tail** - Set in continuation of the spine, extending without kinks, twists, or pronounced curvature, and not carried too gaily.

**Gait:** Fluid and smooth. Forelegs reach well forward, without much lift, in unison with the driving action of hind legs. The correct shoulder assembly and well-fitted elbows allow the long, free stride in front. Viewed from the front, the legs do not move in exact parallel planes, but incline slightly inward. Hind legs drive on a line with the forelegs, with hock joints and rear pasterns (metatarsus) turning neither in nor out. The propulsion of the hind leg depends on the dog's ability to carry the hind leg to complete extension. Viewed in profile, the forward reach of the hind leg equals the rear extension. The thrust of correct movement is seen when the rear pads are clearly exposed during rear extension. Rear feet do not reach upward toward the abdomen and there is no appearance of walking on the rear pasterns. Feet must travel parallel to the line of motion with no tendency to swing out, cross over, or interfere with each other. Short, choppy movement, rolling or high-stepping gait, close or overly wide coming or going are incorrect. The Dachshund must have agility, freedom of movement, and endurance to do the work for which he was developed.

**Temperament:** The Dachshund is clever, lively and courageous to the point of rashness, persevering in above- and below-ground work, with all the senses well-developed. Any display of shyness is a serious fault.

**Special Characteristics of the Three Coat Varieties:** The Dachshund is bred with three varieties of coat: (1) Smooth; (2) Wirehaired; (3) Longhaired and is shown in two sizes, standard and miniature. All three varieties and both sizes must conform to the characteristics already specified. The following features are applicable for each variety:

**Smooth Dachshund:** Coat-Short, smooth and shining. Should be neither too long nor too thick. Ears not leathery. Tail-Gradually tapered to a point, well but not too richly haired. Long sleek bristles on the underside are considered a patch of strong-growing hair, not a fault. A brush tail is a fault, as is also a partly or wholly hairless tail. Color of Hair-Although base color is immaterial, certain patterns and basic colors predominate. One-colored Dachshunds include red and cream, with or without a shading of interspersed dark hairs. A small amount of white on the chest is acceptable, but not desirable. Nose and nails-black. Two-colored Dachshunds include black, chocolate, wild boar, gray (blue) and fawn (Isabella), each with deep, rich tan or cream markings over the eyes, on the sides of the jaw and underlip, on the inner edge of the ear, front, breast, sometimes on the throat, inside and behind the front legs, on the paws and around the anus, and from there to about one-third to one-half of the length of the tail on the underside. Undue
prominence of tan or cream markings is undesirable. A small amount of white on the chest is acceptable but not desirable. Nose and nails-in the case of black dogs, black; for chocolate and all other colors, dark brown, but self-colored is acceptable.

Dappled Dachshunds-The dapple (merle) pattern is expressed as lighter-colored areas contrasting with the darker base color, which may be any acceptable color. Neither the light nor the dark color should predominate. Nose and nails are the same as for one- and two-colored Dachshunds. Partial or wholly blue (wall) eyes are as acceptable as dark eyes. A large area of white on the chest of a dapple is permissible.

Brindle is a pattern (as opposed to a color) in which black or dark stripes occur over the entire body although in some specimens the pattern may be visible only in the tan points.

Sable-the sable pattern consists of a uniform dark overlay on red dogs. The overlay hairs are double-pigmented, with the tip of each hair much darker than the base color. The pattern usually displays a widow's peak on the head. Nose, nails and eye rims are black. Eyes are dark, the darker the better.

**Wirehaired Dachshund:** Coat-With the exception of jaw, eyebrows, and ears, the whole body is covered with a uniform tight, short, thick, hard outer coat but with finer, somewhat softer, shorter hairs (undercoat) everywhere distributed between the coarser hairs. The absence of an undercoat is a fault. The distinctive facial furnishings include a beard and eyebrows. On the ears the hair is shorter than on the body, almost smooth. The general arrangement of the hair is such that the wirehaired Dachshund, when viewed from a distance, resembles the smooth. Any sort of soft hair in the outercoat, wherever found on the body, especially on the top of the head, is a fault. The same is true of long, curly, or wavy hair, or hair that sticks out irregularly in all directions. Tail-Robust, thickly haired, gradually tapering to a point. A flag tail is a fault. Color of Hair-While the most common colors are wild boar, black and tan, and various shades of red, all colors and patterns listed above are admissible. Wild boar (agouti) appears as banding of the individual hairs and imparts an overall grizzled effect which is most often seen on wirehaired Dachshunds, but may also appear on other coats. Tan points may or may not be evident. Variations include red boar and chocolate-and-tan boar. Nose, nails and eye rims are black on wild-boar and red-boar Dachshunds. On chocolate-and-tan-boar Dachshunds, nose, nails, eye rims and eyes are self-colored, the darker the better. A small amount of white on the chest, although acceptable, is not desirable. Nose and nails-same as for the smooth variety.

**Longhaired Dachshund:** Coat - The sleek, glistening, often slightly wavy hair is longer under the neck and on forechest, the underside of the body, the ears and behind the legs. The coat gives the dog an elegant appearance. Short hair on the ear is not desirable. Too profuse a coat which masks type, equally long hair over the whole body, a curly coat, or a pronounced parting on the back are faults. Tail-Carried gracefully in prolongation of the spine; the hair attains its greatest length here and forms a veritable flag. Color of Hair - Same as for the smooth Dachshund. Nose and nails - same as for the smooth.

The foregoing description is that of the ideal Dachshund. Any deviation from the above described dog must be penalized to the extent of the deviation keeping in mind the importance of the contribution of the various features toward the basic original purpose of the breed.

**Disqualification:** Knuckling over of front legs.
Official Standard of the English Foxhound

**Head:** Should be of full size, but by no means heavy. Brow pronounced, but not high or sharp. There should be a good length and breadth, sufficient to give in a dog hound a girth in front of the ears of fully 16 inches. The nose should be long (4½ inches) and wide, with open nostrils. **Ears** set on low and lying close to the cheeks. Most English hounds are "rounded" which means that about 1½ inches is taken off the end of the ear. The teeth must meet squarely, either a pig-mouth (overshot) or undershot being a disqualification.

**Neck:** Must be long and clean, without the slightest throatiness, not less than 10 inches from cranium to shoulder. It should taper nicely from shoulders to head, and the upper outline should be slightly convex.

The Shoulders should be long and well clothed with muscle, without being heavy, especially at the points. They must be well sloped, and the true arm between the front and the elbow must be long and muscular, but free from fat or lumber. Chest and Back Ribs - The chest should girth over 31 inches in a 24-inch hound, and the back ribs must be very deep.

**Back and Loin:** Must both be very muscular, running into each other without any contraction between them. The couples must be wide, even to raggedness, and the topline of the back should be absolutely level, the stern well set on and carried gaily but not in any case curved over the back like a squirrel's tail. The end should taper to a point and there should be a fringe of hair below. The hindquarters or propellers are required to be very strong, and as endurance is of even greater consequence than speed, straight stifles are preferred to those much bent as in a Greyhound. Elbows set quite straight, and neither turned in nor out are a *sine qua non*. They must be well let down by means of the long true arm above mentioned.

**Legs and Feet:** Every Master of Foxhounds insists on legs as straight as a post, and as strong; size of bone at the ankle being especially regarded as all important. The desire for straightness had a tendency to produce knuckling-over, which at one time was countenanced, but in recent years this defect has been eradicated by careful breeding and intelligent adjudication, and one sees very little of this trouble in the best modern Foxhounds. The bone cannot be too large, and the feet in all cases should be round and catlike, with well-developed knuckles and strong horn, which last is of the greatest importance.

**Color and Coat:** Not regarded as very important, so long as the former is a good "hound color," and the latter is short, dense, hard, and glossy. Hound colors are black, tan, and white, or any combination of these three, also the various "pies" compounded of white and the color of the hare and badger, or yellow, or tan. The symmetry of the Foxhound is of the greatest importance, and what is known as "quality" is highly regarded by all good judges.

**Disqualification:** Pig-mouth (overshot) or undershot.

Approved 1935
Official Standard of the Greyhound

Head: Long and narrow, fairly wide between the ears, scarcely perceptible stop, little or no development of nasal sinuses, good length of muzzle, which should be powerful without coarseness. Teeth very strong and even in front.

Ears: Small and fine in texture, thrown back and folded, except when excited, when they are semi-pricked.

Eyes: Dark, bright, intelligent, indicating spirit.

Neck: Long, muscular, without throatiness, slightly arched, and widening gradually into the shoulder.

Shoulders: Placed as obliquely as possible, muscular without being loaded.

Forelegs: Perfectly straight, set well into the shoulders, neither turned in nor out, pasterns strong.

Chest: Deep, and as wide as consistent with speed, fairly well-sprung ribs.

Back: Muscular and broad.

Loins: Good depth of muscle, well arched, well cut up in the flanks.

Hindquarters: Long, very muscular and powerful, wide and well let down, well-bent stifles. Hocks well bent and rather close to ground, wide but straight fore and aft.

Feet: Hard and close, rather more hare than catfeet, well knuckled up with good strong claws.

Tail: Long, fine and tapering with a slight upward curve.

Coat: Short, smooth and firm in texture.

Color:Immaterial.

Weight: Dogs, 65 to 70 pounds; bitches 60 to 65 pounds.

General symmetry and quality 10
Head and neck 20
Chest and shoulders 20
Back 10
Quarters 20
Legs and feet 20
Total 100
Official Standard of the Harrier

General Appearance: Developed in England to hunt hare in packs, Harriers must have all the attributes of a scenting pack hound. They are very sturdily built with large bone for their size. They must be active, well balanced, full of strength and quality, in all ways appearing able to work tirelessly, no matter the terrain, for long periods. Running gear and scenting ability are particularly important features. The Harrier should, in fact, be a smaller version of the English Foxhound.

Size, Proportion, Substance: Size - 19 to 21 inches for dogs and bitches, variation of one inch in either direction is acceptable. Proportion is off-square. The Harrier is slightly longer from point of shoulder to rump than from withers to ground. Substance - Solidly built, full of strength and quality. The breed has as much substance and bone as possible without being heavy or coarse.

Head: The head is in proportion to the overall dog. No part of the head should stand out relative to the other parts. The expression is gentle when relaxed, sensible yet alert when aroused. Eyes are medium size, set well apart, brown or hazel color in darker dogs, lighter hazel to yellow in lighter dogs, though darker colors are always desired. Ears are set on low and lie close to the cheeks, rounded at the tips.

The skull is in proportion to the entire animal, with good length and breadth and a bold forehead. The stop is moderately defined. The muzzle from stop to tip of nose is approximately the same length as the skull from stop to occiput. The muzzle is substantial with good depth, and the lips complete the square, clean look of the muzzle, without excess skin or flews. A good nose is essential. It must be wide, with well opened nostrils. Teeth meet in a scissors bite or they may be level. Overshot or undershot bites faulted to the degree of severity of the misalignment.

Neck, Topline, Body: The neck is long and strong with no excess skin or throatiness, sweeping smoothly into the muscling of the forequarters. The topline is level. Back muscular with no dip behind the withers or roach over the loin. Body-Chest deep, extending to the elbows, with well sprung ribs that extend well back, providing plenty of heart and lung room. The ribs should not be so well sprung that they interfere with the free, efficient movement of the front assembly. The loin is short, wide and well muscled. The tail is long, set on high and carried up from 12 o'clock to 3 o'clock, depending on attitude. It tapers to a point with a brush of hair. The tail should not be curled over the back.

Forequarters: Moderate angulation, with long shoulders sloping into the muscling of the back, clean at the withers. The shoulders are well clothed with muscle without being excessively heavy or loaded, giving the impression of free, strong action. Elbows are set well away from the ribs, running parallel with the body and not turning outwards. Good straight legs with plenty of bone running well down to the toes, but not overburdened, inclined to knuckle over very slightly but not exaggerated in the slightest degree. Feet are round and catlike, with toes set close together turning slightly inwards. The pads are thick, well developed and strong.

Hindquarters: Angulation in balance with the front assembly, so that rear drive is in harmony with front reach. Well developed muscles, providing strength for long hours of work, are important. Endurance is more important than pure speed, and as such, the stifles are only moderately angulated. Feet point straight ahead, are round and catlike with toes set close together, and thick, well developed pads.
Coat: Short, dense, hard and glossy. Coat texture on the ears is finer than on the body. There is a brush of hair on the underside of the tail.
Color: Any color, not regarded as very important.
Gait: Perfect coordination between the front and hind legs. Reach and drive are consistent with the desired moderate angulation. Coming and going, the dog moves in a straight line, evidencing no sign of crabbing. A slight toeing-in of the front feet is acceptable. Clean movement coming and going is important, but not nearly as important as side gait, which is smooth, efficient and ground-covering.
Temperament: Outgoing and friendly, as a working pack breed, Harriers must be able to work in close contact with other hounds. Therefore, aggressiveness towards other dogs cannot be tolerated.

Approved December 13, 1988
Effective February 1, 1989
Official Standard of the Ibizan Hound

General Appearance: The Ibizan's clean-cut lines, large prick ears and light pigment give it a unique appearance. A hunting dog whose quarry is primarily rabbits, this ancient hound was bred for thousands of years with function being of prime importance. Lithe and racy, the Ibizan possesses a deerlike elegance combined with the power of a hunter. Strong, without appearing heavily muscled, the Ibizan is a hound of moderation. With the exception of the ears, he should not appear extreme or exaggerated.

In the field the Ibizan is as fast as top coursing breeds and without equal in agility, high jumping and broad jumping ability. He is able to spring to great heights from a standstill.

Size, Proportion, Substance: Size - The height of dogs is 23½ to 27½ inches at the withers. Bitches are 22½ to 26 inches at the withers. There is no preference for size within this range. Sizes slightly over or under the norms are not to be regarded as demerits when other qualities are good. Weight - Average weight of dogs is 50 pounds; bitches, 45 pounds. Proportion - Slightly longer than tall. Substance - The Ibizan possesses clean, fine bone. The muscling is strong, yet flat, with no sign of heaviness.

Head: Long and narrow in the form of a sharp cone truncated at its base. Finely chiseled and extremely dry fleshed. Expression - The Ibizan has an elegant, deer-like look. The eyes are oblique and small, ranging in color from clear amber to caramel. The rims are the color of the nose and are fully or partially pigmented. The appearance of the eye is intelligent, alert and inquisitive. The ears are large, pointed, and natural. On alert the ear should never droop, bend, or crease. Highly mobile, the ear can point forward, sideways, or be folded backward, according to mood. On alert, the lowest point of the base is at level of the eye. On frontal examination, the height of the ear is approximately 2½ times that of the widest point of the base. Skull - Long and flat, prominent occipital bone, little defined stop; narrow brow. The muzzle is elongated, fine, and slender with a very slight Roman convex. The length from the eyes to point of nose is equal to the distance from eyes to occiput. The muzzle and skull are on parallel planes. The nose is prominent, extending beyond the lower jaw. It is of a rosy flesh color, never black or liver, and tends to harmonize with that of the coat. Pigment is solid or butterfly. Nostrils are open. Lips are thin and tight and the color of the nose. Flews are tight and dry fleshed. Bite - The teeth are perfectly opposed in a scissors bite; strong and well set.

Neck, Topline, Body: The neck is long, slender, slightly arched and strong, yet flat muscled. The topline, from ears to tail, is smooth and flowing. The back is level and straight. Body - The chest is deep and long with the breastbone sharply angled and prominent. The ribs are slightly sprung. The brisket is approximately 2½ inches above the elbow. The deepest part of the chest, behind the elbow, is nearly to or to the elbow. The abdomen is well tucked up, but not exaggerated. The loin is very slightly arched, of medium breadth and well muscled. The croup is very slightly sloping. The tail is set low, highly mobile, and reaches at least to the hock. It is carried in a sickle, ring, or saber position, according to the mood and individual specimen.

Forequarters: Angulation is moderate. The shoulders are elastic but never loose with moderate breadth at the withers. The shoulder blades are well laid back. At the point of the shoulder they join to a rather upright upper arm. The elbow is positioned in front of the deepest part of the chest. It is well held in but not so much as to restrict movement. Legs - The forearms are very long, strong, straight, and close, lying flat on the chest and continuing in a straight line to the ground. Bone is clean and fine. The pasterns are strong and flexible, slightly sloping, with well
developed tendons. Dewclaw removal is optional. Feet: hare-foot. The toes are long, closed and very strong. Interdigital spaces are well protected by hair. Pads are durable. Nails are white. **Hindquarters:** Angulation is moderate with the hindquarters being set under the body. Legs - The thighs are very strong with flat muscling. The hocks are straight when viewed from the rear. Bone is clean and fine. There are no rear dewclaws. The feet are as in front. **Coat:** There are two types of coat; both untrimmed. Short-shortest on head and ears and longest at back of the thighs and under the tail. Wire-haired can be from one to three inches in length with a possible generous moustache. There is more hair on the back, back of thighs, and tail. Both types of coat are hard in texture and neither coat is preferable to the other. **Color:** White or red, (from light, yellowish-red called "lion" to deep red), solid or in any combination. No color or pattern is preferable to the other. Disqualify any color other than white or red. **Gait:** An efficient, light and graceful single tracking movement. A suspended trot with joint flexion when viewed from the side. The Ibizan exhibits smooth reach in front with balanced rear drive, giving the appearance of skimming over the ground. **Temperament:** The Ibizan Hound is even-tempered, affectionate and loyal. Extremely versatile and trainable, he makes an excellent family pet, and is well suited to the breed ring, obedience, tracking and lure-coursing. He exhibits a keen, natural hunting instinct with much determination and stamina in the field. **Disqualification:** *Any color other than white or red.*

Approved September 11, 1989  
Effective November 1, 1989
Official Standard of the Irish Wolfhound

General Appearance: Of great size and commanding appearance, the Irish Wolfhound is remarkable in combining power and swiftness with keen sight. The largest and tallest of the galloping hounds, in general type he is a rough-coated, Greyhound-like breed; very muscular, strong though gracefully built; movements easy and active; head and neck carried high, the tail carried with an upward sweep with a slight curve towards the extremity. The minimum height and weight of dogs should be 32 inches and 120 pounds; of bitches, 30 inches and 105 pounds; these to apply only to hounds over 18 months of age. Anything below this should be debarred from competition. Great size, including height at shoulder and proportionate length of body, is the desideratum to be aimed at, and it is desired to firmly establish a race that shall average from 32 to 34 inches in dogs, showing the requisite power, activity, courage and symmetry.

Head: Long, the frontal bones of the forehead very slightly raised and very little indentation between the eyes. Skull, not too broad. Muzzle, long and moderately pointed. Ears, small and Greyhound-like in carriage.

Neck: Rather long, very strong and muscular, well arched, without dewlap or loose skin about the throat.

Back: Rather long than short. Loins arched.

Tail: Long and slightly curved, of moderate thickness, and well covered with hair.

Belly: Well drawn up.

Forequarters: Shoulders, muscular, giving breadth of chest, set sloping. Elbows well under, neither turned inwards nor outwards.

Leg: Forearm muscular, and the whole leg strong and quite straight.

Hindquarters: Muscular thighs and second thigh long and strong as in the Greyhound, and hocks well let down and turning neither in nor out.

Feet: Moderately large and round, neither turned inwards nor outwards. Toes, well arched and closed. Nails, very strong and curved.

Hair: Rough and hard on body, legs and head; especially wiry and long over eyes and underjaw.

Color and Markings: The recognized colors are gray, brindle, red, black, pure white, fawn or any other color that appears in the Deerhound.

Faults: Too light or heavy a head, too highly arched frontal bone; large ears and hanging flat to the face; short neck; full dewlap; too narrow or too broad a chest; sunken or hollow or quite straight back; bent forelegs; overbent fetlocks; twisted feet; spreading toes; too curly a tail; weak hindquarters and a general want of muscle; too short in body. Lips or nose liver-colored or lacking pigmentation.

List of Points in Order of Merit

1. Typical. The Irish Wolfhound is a rough-coated Greyhound-like breed, the tallest of the coursing hounds and remarkable in combining power and swiftness.
2. Great size and commanding appearance.
3. Movements easy and active.
4. Head, long and level, carried high.
5. Forelegs, heavily boned, quite straight; elbows well set under.
6. Thighs long and muscular; second thighs, well muscled, stifles nicely bent.
7. Coat, rough and hard, especially wiry and long over eyes and under jaw.
8. Body, long, well-ribbed up, with ribs well sprung, and great breadth across hips.
9. Loins arched, belly well drawn up.
10. Ears, small, with Greyhound like carriage.
11. Feet, moderately large and round; toes, close, well arched.
12. Neck, long, well arched and very strong.
13. Chest, very deep, moderately broad.
15. Tail, long and slightly curved.
16. Eyes, dark.

Note - The above in no way alters the "Standard of Excellence," which must in all cases be rigidly adhered to; they simply give the various points in order of merit. If in any case they appear at variance with Standard of Excellence, it is the latter which is correct.

Approved September 12, 1950
Official Standard of the Norwegian Elkhound

General Appearance: The Norwegian Elkhound is a hardy gray hunting dog. In appearance, a typical northern dog of medium size and substance, square in profile, close coupled and balanced in proportions. The head is broad with prick ears, and the tail is tightly curled and carried over the back. The distinctive gray coat is dense and smooth lying. As a hunter, the Norwegian Elkhound has the courage, agility and stamina to hold moose and other big game at bay by barking and dodging attack, and the endurance to track for long hours in all weather over rough and varied terrain.

Size, Proportion, Substance: Height at the withers for dogs is 20½ inches, for bitches 19½ inches. Weight for dogs about 55 pounds, for bitches about 48 pounds. Square in profile and close coupled. Distance from brisket to ground appears to be half the height at the withers. Distance from forechest to rump equals the height at the withers. Bone is substantial, without being coarse.

Head: Head broad at the ears, wedge shaped, strong and dry (without loose skin). Expression keen, alert, indicating a dog with great courage. Eyes very dark brown, medium in size, oval, not protruding. Ears set high, firm and erect, yet very mobile. Comparatively small; slightly taller than their width at the base with pointed (not rounded) tips. When the dog is alert, the orifices turn forward and the outer edges are vertical. When relaxed or showing affection, the ears go back, and the dog should not be penalized for doing this during the judge’s examination. Viewed from the side, the forehead and back of the skull are only slightly arched; the stop not large, yet clearly defined. The muzzle is thickest at the base and, seen from above or from the side, tapers evenly without being pointed. The bridge of the nose is straight, parallel to and about the same length as the skull. Lips are tightly closed and teeth meet in a scissors bite.

Neck, Topline, Body: Neck of medium length, muscular, well set up with a slight arch and with no loose skin on the throat. Topline - The back is straight and strong from its high point at the withers to the root of the tail. The body is short and close-coupled with the rib cage accounting for most of its length. Chest deep and moderately broad; brisket level with points of elbows; and ribs well sprung. Loin short and wide with very little tuck-up. Tail set high, tightly curled, and carried over the centerline of the back. It is thickly and closely haired, without brush, natural and untrimmed.

Forequarters: Shoulders sloping with elbows closely set on. Legs well under body and medium in length; substantial, but not coarse, in bone. Seen from the front, the legs appear straight and parallel. Single dewclaws are normally present. Feet-Paws comparatively small, slightly oval with tightly closed toes and thick pads. Pasterns are strong and only slightly bent. Feet turn neither in nor out.

Hindquarters: Moderate angulation at stifle and hock. Thighs are broad and well muscled. Seen from behind, legs are straight, strong and without dewclaws. Feet as in front.

Coat: Thick, hard, weather resisting and smooth lying; made up of soft, dense, woolly undercoat and coarse, straight covering hairs. Short and even on head, ears, and front of legs; longest on back of neck, buttocks and underside of tail. The coat is not altered by trimming, clipping or artificial treatment. Trimming of whiskers is optional. In the show ring, presentation in a natural, unaltered condition is essential.

Color: Gray, medium preferred, variations in shade determined by the length of black tips and quantity of guard hairs. Undercoat is clear light silver as are legs, stomach, buttocks, and
underside of tail. The gray body color is darkest on the saddle, lighter on the chest, mane and
distinctive harness mark (a band of longer guard hairs from shoulder to elbow). The muzzle, ears
and tail tip are black. The black of the muzzle shades to lighter gray over the forehead and skull.
Yellow or brown shading, white patches, indistinct or irregular markings, "sooty" coloring on the
lower legs and light circles around the eyes are undesirable. Any overall color other than gray as
described above, such as red, brown, solid black, white or other solid color, disqualifies.
**Gait:** Normal for an active dog constructed for agility and endurance. At a trot the stride is even
and effortless; the back remains level. As the speed of the trot increases, front and rear legs
converge equally in straight lines toward a centerline beneath the body, so that the pads appear to
follow in the same tracks (single track). Front and rear quarters are well balanced in angulation
and muscular development.
**Temperament:** In temperament, the Norwegian Elkhound is bold and energetic, an effective
guardian yet normally friendly, with great dignity and independence of character.
**Summary:** The Norwegian Elkhound is a square and athletic member of the northern dog
family. His unique coloring, weather resistant coat and stable disposition make him an ideal
multipurpose dog at work or at play.
**Disqualifications:** *An overall color other than gray.*

Approved December 13, 1988
Effective February 1, 1989
Official Standard of the Otterhound

General Appearance: The Otterhound is a large, rough-coated hound with an imposing head showing great strength and dignity, and the strong body and long striding action fit for a long day's work. It has an extremely sensitive nose, and is inquisitive and perseverant in investigating scents. The Otterhound hunts its quarry on land and water and requires a combination of characteristics unique among hounds—most notably a rough, double coat; and substantial webbed feet. Otterhounds should not be penalized for being shown in working condition (lean, well muscled, with a naturally stripped coat). Any departure from the following points should be considered a fault; its seriousness should be regarded in exact proportion to its degree.

Size, Proportion, Substance: Males are approximately 27 inches at the withers, and weigh approximately 115 pounds. Bitches are approximately 24 inches at the withers, and weigh approximately 80 pounds. This is not an absolute, but rather a guideline. The Otterhound is slightly rectangular in body; the length from point of shoulder to buttocks is slightly greater than the height at the withers. The Otterhound has good substance with strongly boned legs and broad muscles, without being coarse. Balance, soundness and type are of greater importance than size.

Head: The head is large, fairly narrow, and well covered with hair. The head should measure 11 to 12 inches from tip of nose to occiput in a hound 26 inches at the withers, with the muzzle and skull approximately equal in length. This proportion should be maintained in larger and smaller hounds. The expression is open and amiable. The eyes are deeply set. The haw shows only slightly. The eyes are dark, but eye color and eye rim pigment will complement the color of the hound. Dogs with black pigmented noses and eye rims should have darker eyes, while those with liver or slate pigment may have hazel eyes. The ears, an essential feature of this breed, are long, pendulous, and folded (the leading edge folds or rolls to give a draped appearance). They are set low, at or below eye level, and hang close to the head, with the leather reaching at least to the tip of the nose. They are well covered with hair. The skull (cranium) is long, fairly narrow under the hair, and only slightly domed. The stop is not pronounced. The muzzle is square, with no hint of snipiness; the jaws are powerful with deep flews. From the side, the planes of the muzzle and skull should be parallel. The nose is large, dark, and completely pigmented, with wide nostrils. The jaws are powerful and capable of a crushing grip. A scissors bite is preferred.

Neck, Topline, Body: The neck is powerful and blends smoothly into well laid back, clean shoulders, and should be of sufficient length to allow the dog to follow a trail. It has an abundance of hair; a slight dewlap is permissible. The topline is level from the withers to the base of tail. The chest is deep reaching at least to the elbows on a mature hound. Forechest is evident, there is sufficient width to impart strength and endurance. There should be no indication of narrowness or weakness. The well sprung, oval rib cage extends well towards the rear of the body. The loin is short, broad and strong. The tail is set high, and is long reaching at least to the hock. The tail is thicker at the base, tapers to a point, and is feathered (covered and fringed with hair). It is carried saber fashion (not forward over the back) when the dog is moving or alert, but may droop when the dog is at rest.

Forequarters: Shoulders are clean, powerful, and well sloped with moderate angulation at shoulders and elbows. Legs are strongly boned and straight, with strong, slightly sprung pasterns. Dewclaws on the forelegs may be removed. Feet - Both front and rear feet are large, broad, compact when standing, but capable of spreading. They have thick, deep pads, with arched toes; they are web-footed (membranes connecting the toes allow the foot to spread).
**Hindquarters:** Thighs and second thighs are large, broad, and well muscled. Legs have moderately bent stifles with well-defined hocks. Hocks are well let down, turning neither in nor out. Legs on a standing hound are parallel when viewed from the rear. Angulation front and rear must be balanced and adequate to give forward reach and rear drive. Dewclaws, if any, on the hind legs are generally removed. Feet are as previously described.

**Coat:** The coat is an essential feature of the Otterhound. Coat texture and quality are more important than the length. The outer coat is dense, rough, coarse and crisp, of broken appearance. Softer hair on the head and lower legs is natural. The outer coat is two to four inches long on the back and shorter on the extremities. A water-resistant undercoat of short woolly, slightly oily hair is essential, but in the summer months may be hard to find except on the thighs and shoulders. The ears are well covered with hair, and the tail is feathered (covered and fringed with hair). A naturally stripped coat lacking length and fringes is correct for an Otterhound that is being worked. A proper hunting coat will show a hard outer coat and wooly undercoat. The Otterhound is shown in a natural coat, with no sculpturing or shaping of the coat. Faults - A soft outer coat is a very serious fault as is a wooly textured outer coat. Lack of undercoat is a serious fault. An outer coat much longer than six inches becomes heavy when wet and is a fault. Any evidence of stripping or scissoring of coat to shape or stylize should be strongly penalized as a fault.

**Color:** Any color or combination of colors is acceptable. There should be no discrimination on the basis of color. The nose should be dark and fully pigmented, black, liver, or slate, depending on the color of the hound. Eye rim pigment should match the nose.

**Gait:** The Otterhound moves freely with forward reach and rear drive. The gait is smooth, effortless, and capable of being maintained for many miles. Characteristic of the Otterhound gait is a very loose, shambling walk, which springs immediately into a loose and very long striding, sound, active trot with natural extension of the head. The gallop is smooth and exceptionally long striding. Otterhounds single track at slow speeds. Otterhounds do not lift their feet high off the ground and may shuffle when they walk or move at a slow trot. The Otterhound should be shown on a loose lead.

**Temperament:** The Otterhound is amiable, boisterous and even-tempered.

Approved October 10, 1995
Effective November 30, 1995
Official Standard of the Petit Basset Griffon Vendéen

General Appearance: The Petit Basset Griffon Vendéen is a French scent hound developed first and foremost to hunt small game over the rough and difficult terrain of the Vendéen region. To function efficiently, he must be equipped with certain characteristics. He is bold and vivacious in character; compact, tough and robust in construction. He has an alert outlook, lively bearing and a good voice freely and purposefully used.

The most distinguishing characteristics of this bold hunter are: his rough, unrefined outlines; his proudly carried head displaying definitive long eyebrows, beard, and moustache; his strong, tapered tail carried like a saber, alert and in readiness. Important to breed type is the compact, casual, rather tousled appearance, with no feature exaggerated and his parts in balance.

Any deviation from the ideal described in the standard should be penalized to the extent of the deviation. Structural faults common to all breeds are as undesirable in the PBGV as in any other breed, regardless of whether they are specifically mentioned.

Size, Proportion, Substance: Size - PBGVs measure between 13 and 15 inches at the withers. Height over 15 inches is a disqualification. Height under 13 inches is a disqualification at one year of age or older. Proportion - When viewed in profile, the body is somewhat longer than tall when measured from point of shoulder to buttocks, as compared to the height from withers to ground. Substance - Strong bone with substance in proportion to overall dog.

Head: The head is carried proudly and, in size, must be in balance with the overall dog. It is longer than its width in a ratio of approximately two to one. A coarse or overly large head is to be penalized. Expression alert, friendly and intelligent. Eyes large and dark with good pigmentation, somewhat oval in shape, showing no white. The red of the lower eyelid should not show. The eyes are surmounted by long eyebrows, standing forward, but not obscuring the eyes. Ears supple, narrow and fine, covered with long hair, folding inward and ending in an oval shape. The leathers reach almost to the end of the nose. They are set on low, below the line of the eyes. An overly long or high-set ear should be penalized. Skull domed, oval in shape when viewed from the front. It is well cut away under the eyes and has a well-developed occipital protuberance. Stop clearly defined. Muzzle - The length of the muzzle from nose to stop is slightly shorter than the length from the stop to occiput. The underjaw is strong and well developed. Nose black and large, with wide nostrils. A somewhat lighter shading is acceptable in lighter colored dogs. A butterfly nose is a fault. Lips - The lips are covered by long hair forming a beard and moustache. Bite - It is preferable that the teeth meet in a scissors bite, but a level bite is acceptable.

Neck, Topline, Body: Neck - The neck is long and strong, without throatiness, and flows smoothly into the shoulders. Topline - The back is visibly level from withers to croup. There is a barely perceptible rise over a strong loin. Viewed in profile, the withers and the croup should be equidistant from the ground. Body muscular, somewhat longer than tall. Compact, casual in appearance, with no feature exaggerated and his parts in balance. Chest rather deep, with prominent sternum. Ribs moderately rounded, extending well back. Loin short, strong, and muscular. There is but little tuck-up. Tail of medium length, set on high, it is strong at the base and tapers regularly. It is well furnished with hair, has but a slight curve and is carried proudly like the blade of a saber; normally pointing at about two o'clock. In a curved downward position the tip of the tail bone should reach no further than the hock joint.

Forequarters: Shoulders clean and well laid back. Upper arm approximately equal in length to the shoulder blade. Elbows close to the body. Legs - The length of leg from elbow to ground should be slightly more than half the height from withers to ground. Viewed from the front, it is desirable that the forelegs be straight, but a slight crook is acceptable. In either case, the leg appears straight, is strong and well boned, but never coarse nor weedy. Improperly constructed front assemblies, including poor shoulder placement, short upper arms, out at elbows, lack of angulation and fiddle fronts, are all serious faults. Pasterns strong and slightly sloping. Any tendency to knuckle over is a serious fault. Dewclaws
Hindquarters: Strong and muscular with good bend of stifle. A well-defined second thigh. Hips wide, thighs well muscled. Hocks are short and well angulated, perpendicular from hock to ground. Feet are as in front. Except that they must point straight ahead.

Coat: The coat is rough, long without exaggeration and harsh to the touch, with a thick shorter undercoat. It is never silky or woolly. The eyes are surmounted by long eyebrows, standing forward but not obscuring the eyes. The ears are covered by long hair. The lips are covered by long hair forming a beard and moustache. The tail is well furnished with hair. The overall appearance is casual and tousled. The rough, unrefined outline and tousled appearance of this rustic hunting hound is essential. Any sculpting, clipping, scissoring or shaping of the coat is contrary to PBGV breed type. The PBGV coat should be clean, neatened as necessary, but always remain casually disarrayed. Any deviation from the ideal described here and in the General Appearance Section of the official standard should be penalized to the extent of the deviation.

Color: White with any combination of lemon, orange, black, sable, tricolor or grizzle markings, providing easy visibility in the field.

Gait: The movement should be free at all speeds. Front action is straight and reaching well forward. Going away, the hind legs are parallel and have great drive. Convergence of the front and rear legs towards his center of gravity is proportional to the speed of his movement. Gives the appearance of an active hound, capable of a full day's hunting.

Temperament: Confident, happy, extroverted, independent yet willing to please, never timid nor aggressive.

Disqualification: Height over 15 inches is a disqualification. Height under 13 inches is a disqualification at one year of age or older.

Approved April 22, 2014
Effective July 1, 2014
Official Standard of the Pharaoh Hound

General Appearance: General Appearance is one of grace, power and speed. The Pharaoh Hound is medium sized, of noble bearing with hard clean-cut lines—graceful, well balanced, very fast with free easy movement and alert expression. The following description is that of the ideal Pharaoh Hound. Any deviation from the below described dog must be penalized to the extent of the deviation.

Size, Proportion, Substance: Height - Dogs 23 to 25 inches. Bitches 21 to 24 inches. All-over balance must be maintained. Length of body from breast to haunch bone slightly longer than height of withers to ground. Lithe.

Head: Alert expression. Eyes amber colored, blending with coat; oval, moderately deep set with keen intelligent expression. Ears medium high set, carried erect when alert, but very mobile, broad at the base, fine and large. Skull long, lean and chiseled. Only slight stop. Foreface slightly longer than the skull. Top of the skull parallel with the foreface representing a blunt wedge. Nose flesh colored, blending with the coat. No other color. Powerful jaws with strong teeth. Scissors bite.

Neck, Topline, Body: Neck long, lean and muscular with a slight arch to carry the head on high. Clean throat line. Almost straight topline. Slight slope from croup to root of tail. Body lithe. Deep brisket almost down to point of elbow. Ribs well sprung. Moderate tuck-up. Tail medium set - fairly thick at the base and tapering whip-like, reaching below the point of hock in repose. Well carried and curved when in action. The tail should not be tucked between the legs. A screw tail is a fault.

Forequarters: Shoulders long and sloping and well laid back. Strong without being loaded. Elbows well tucked in. Forelegs straight and parallel. Pasterns strong. Dewclaws may be removed. Feet neither cat nor hare but strong, well knuckled and firm, turning neither in nor out. Paws well padded.

Hindquarters: Strong and muscular. Limbs parallel. Moderate sweep of stifle. Well developed second thigh. Dewclaws may be removed. Feet as in front.

Coat: Short and glossy, ranging from fine and close to slightly harsh with no feathering. Accident blemishes should not be considered as faults.

Color: Ranging from tan/rich, tan/chestnut with white markings allowed as follows: White tip on tail strongly desired. White on chest (called "the Star"). White on toes and slim white snip on center line of face permissible. Flecking or other white undesirable, except for any solid white spot on the back of neck, shoulder, or any part of the back or sides of the dog, which is a disqualification.

Gait: Free and flowing; the head should be held fairly high and the dog should cover the ground well without any apparent effort. The legs and feet should move in line with the body; any tendency to throw the feet sideways, or a high stepping "hackney" action is a definite fault.

Temperament: Intelligent, friendly, affectionate and playful. Alert and active. Very fast with a marked keenness for hunting, both by sight and scent.

Disqualification: Any solid white spot on the back of neck, shoulder, or any part of the back or sides of the dog.

Approved May 10, 1983
Effective April 3, 1989
Official Standard of the Plott

The Plott may have an identification mark on the rump used to identify the dog when out hunting. Such a mark is not to be penalized when evaluating the dog.

**General Appearance:** A hunting hound of striking color that traditionally brings big game to bay or tree, the Plott is intelligent, alert and confident. Noted for stamina, endurance, agility, determination and aggressiveness when hunting, the powerful, well muscled, yet streamlined Plott combines courage with athletic ability.

**Size, Proportion, Substance:**
- **Size** – Height - Males 20 to 25 inches at the withers. Females 20 to 23 inches at the withers. **Proportion** - General conformation and height in proportion. Faults: Extremely leggy or close to the ground. Weight-(in hunting condition) Males 50 to 60 pounds. Females 40 to 55 pounds. **Substance** - Moderately boned. Strong, yet quick and agile. Faults - Overdone. Carrying too much weight and or too much bone to display speed and dexterity.

**Head:**
- **Carried well up with skin fitting moderately tight. Faults - Folds, dewlap, skin stretched too tightly.**

**Expression** - Confident, inquisitive, determined. Fault - Sad expression.

**Eyes** - Brown or hazel, prominent rather than deeply set. Faults - Drooping eyelids, red haw.

**Ears** - Medium length, soft textured, fairly broad, set moderately high to high. Hanging gracefully with the inside part rolling forward toward the muzzle. Ear spread in males - 18 to 20 inches. Ear spread in females - 17 to 19 inches. When attentive or inquisitive, some Plotts display a semi-erectile power in their ears and lift them enough so a noticeable crease occurs on line with the crown. Disqualification - Length of ear extending beyond the tip of the nose or hanging bloodhound-like, in long, pendulous fashion. **Skull** - Moderately flat. Rounded at the crown with sufficient width between and above the eyes. Faults: Narrow-headed, square, oval or excessively domed. **Muzzle** - Moderate length, flews give it a squarish appearance. Faults - Bluntly squared. Pointed. **Pigmentation** - Eye rims, lips and nose are black. Flews - Black. Fault - Pendulous flews. **Bite** – Teeth - Scissors. Fault - Overshot or undershot.

**Neck, Topline and Body:**

**Forequarters:** Shoulders - Clean, muscular and sloping, indicating speed and strength. Elbow - Squarely set. Forelegs - Straight, smooth, well muscled. Pasterns - Strong and erect. Feet - Firm, tight, well-padded and knuckled, with strong toes. Set directly under the leg. Disqualification - Splayed feet. Nails - Usually black, although shades of reddish brown matching the brindle body color are permissible and buckskin colored dogs have light red nails. May be white when portions of the feet are white.

**Hindquarters:** Angulation - Well bent at stifles and at the hocks. Hips - Smooth, round, and proportionally wide, indicating efficient propulsion. Legs - Long and muscular from hip to hock. From hock to pad short, strong and at right angles to the ground. Upper and second thigh - Powerful and well-muscled. Feet - Set back from under the body. Firm and tight. Toes - Strong.

**Coat:** Smooth, fine, glossy, but thick enough to provide protection from wind and water. Rare specimens are double coated, with a short, soft, thick inner coat concealed by a longer, smoother and stiffer outer coat.
**Color:** Any shade of brindle (a streaked or striped pattern of dark hair imposed on a lighter background) is preferred. This includes the following brindle factors: yellow, buckskin, tan, brown, chocolate, liver, orange, red, light or dark gray, blue or Maltese, dilute black, and black. Other acceptable Plott colors are solid black, any shade of brindle, with black saddle, and black with brindle trim. A rare buckskin, devoid of any brindle, sometimes appears among litters; ranging from red fawn, sandy red, light cream, and yellow ochre, to dark fawn and golden tan. Some white on chest and feet is permissible as is a graying effect around the jaws and muzzle.

**Gait:** Dextrous and graceful, rhythmic footfall. With ample reach in front and drive behind, the Plott easily traverses various terrains with agility and speed. Legs converge to single track at speed.

**Temperament:** Eager to please, loyal, intelligent, alert. Aggressive, bold, and fearless hunter. Disposition generally even, but varies among strains, with a distinction sometimes appearing between those bred for big game and those bred as coonhounds.

**Disqualifications:** Length of ear extending beyond the tip of the nose or hanging bloodhound-like, in long, pendulous fashion. Splayed feet.

Approved: June 1998
Effective: October 1, 1998
Official Standard of the Portuguese Podengo Pequeno

**General Appearance:** A wedge shaped head (a four sided pyramid) with erect ears, a sickle shaped tail, a sound skeleton, well muscled: very lively and intelligent, sober and rustic. This is a breed of moderation.

**Size and Proportion:** Size- The height is 8 to 12 inches and the weight is 9 to 13 pounds. Proportions - The distance from the withers to the bottom of the chest is one half the total height. The length from the point of shoulder to the point of buttocks is 20 percent longer than the height.

**Head:** Lean broad based wedge shaped as a four-sided pyramid when viewed from the top or in profile. A large base and a definite pointed muzzle. **Skull** - Flat, almost straight in profile. Prominent brow bone. Barely perceptible frontal furrow. Relatively flat between the ears. Prominent occiput. Planes: The plane of the muzzle very slightly diverges downward from the plane of the skull. Stop - Barely defined. **Eyes** - Very lively expression with small almond shape set slightly oblique. Not rounded or prominent. Eye color ranges from honey to dark brown in accordance with the coat. **Muzzle** - Curved, when seen from the top. A straight profile which is shorter than the skull, broader at the base, and narrowing to the tip. Cheeks - Lean and obliquely set. Nose - Tapered, obliquely truncated, and prominent at the tip; black or darker colored than the coat. Lips - Close fitting, thin, firm and well pigmented. Jaw/Teeth - Scissor **bite.** Normal occlusion of both jaws. **Ears** - Set obliquely at the level of the eyes, straight, with high mobility, upright or tilted forward when attentive. Pointed, triangular and wider at the base, thin, longer than the width at the base.

**Neck, Topline, Body:** **Neck** - A harmonious transition from head to body. Straight with a slight arch at the nape. Medium in length, well proportioned, strong and muscled. Very dry without dewlaps. **Topline** - Level. Withers - Only slightly visible. Back - Straight and long. Loin - Level, broad and well muscled. Croup - Straight or very slightly sloping and medium size. Well muscled. Chest - The chest reaches to the elbow. It is long and of medium width. The ribcage is slightly sprung. Moderate fore chest. Underline - The belly is lean and slightly tucked up. **Tail** - Medium high set and of medium length. Strong, thick, and tapered with a lightly feathered underside. At rest it falls curved and reaches to the hock joint. In action it rises to the horizontal slightly curved or vertical in the shape of a sickle. A curled tail is a serious fault.

**Forequarters:** Shoulder - Blade moderately laid back. Shoulder and upper arm angle is moderate. Elbow -Well tucked in. Forearm - Straight, long, muscled. Pastern - Short, lean, strong and slightly sloping. Feet - Oval, strong, tight, slightly arched. Strong nails and tough firm pads.

**Coat:** There are two varieties; Smooth coat which is short and very dense. Wire coat (rough) is long and harsh. The hair on the muzzle is longer (bearded) on the wire coat variety. The wire coat is not as dense as the smooth variety. Both varieties are without undercoat. Skin on both varieties is thin and close fitting. A very rustic breed shown naturally. Groomed but not trimmed or sculpted. Dogs whose coat has been altered by excessive sculpting, clipping or artificial means shall be penalized as to be effectively eliminated from competition. A silky coat is a fault.
Color: Yellow or Fawn. Light, medium or dark shades are acceptable. The color can be solid or with white markings or white with markings of the above colors. The following colors are accepted but not preferred. Black or brown, as solid colors or with white markings. White with markings of the accepted colors.

Skin: Mucus membranes are preferably dark pigmented or always darker than the coat. Skin is thin and tight.

Gait: Light trot, easy and agile movements.

Temperament: Very lively and intelligent. A natural rabbit hunter either alone or in a small pack. They seek rabbits among rocks and thick shrub. A companion who willingly serves as a watchdog.

Approved May 11, 2010
Effective January 01, 2011
Official Standard of the Redbone Coonhound

General Appearance: Hunted from swamplands to mountains, the Redbone is surefooted and swift, even on the most difficult terrain. Well-balanced, with a flashy red coat and excellent cold nose, the powerfully built Redbone mingles handsome looks with a confident air and fine hunting talents.

Size, Proportion, Substance: Size – Males - 22 to 27 inches. Females - 21 to 26 inches. Mid-range dog preferred. Proportion - Length well proportioned to height. Should be equal in height from highest point of the shoulder blade to the ground as long measured from sternum to the buttocks. Slightly taller at shoulder than at hips. Substance - Weight should be in proportion with height and bone structure. Working dogs not to be penalized for being slightly underweight. Well boned according to size of dog.

Forequarters: Shoulders - Clean and muscular. Shoulder angulation should have a perfect 90-degree angle or close. Legs - Straight, well-boned. The forelegs will be set under dog and feet under his withers, not under ears. Pasterns - Straight, well set, clean and muscular, denoting both speed and strength. Faults - Forelegs crooked, out at elbows. Feet - Cat-paw type, compact, well padded. Toes - Stout, strong and well-arched. Nails - Well-set. Faults - Flat feet, open feet, hind dewclaws.

Hindquarters: Thighs - Clean and muscular. Fault - Cowhocked. Hindquarters should have the same angulation as the forequarters. Well boned.

Coat: Short, smooth, coarse enough to provide protection.

Color: Solid red preferred. Dark muzzle and small amount of white on brisket and feet permissible. Faults - White on feet extending beyond toes. More white on brisket than an open hand will cover. White stockings on legs.

Gait: Determined, steady, and proud, with good reach and drive.

Temperament: Even-tempered at home but an aggressive hunter. Amenable to formal training. A good family dog that likes to please.
Official Standard of the Rhodesian Ridgeback

General Appearance: The Ridgeback represents a strong, muscular and active hound, symmetrical and balanced in outline. A mature Ridgeback is a handsome, upstanding and athletic dog, capable of great endurance with a fair (good) amount of speed. Of even, dignified temperament, the Ridgeback is devoted and affectionate to his master, reserved with strangers. The peculiarity of this breed is the ridge on the back. The ridge must be regarded as the characteristic feature of the breed.

Size, Proportion, Substance: A mature Ridgeback should be symmetrical in outline, slightly longer than tall but well balanced. Dogs - 25 to 27 inches in height; Bitches - 24 to 26 inches in height. Desirable weight – Dogs - 85 pounds; Bitches - 70 pounds.

Head: Should be of fair length, the skull flat and rather broad between the ears and should be free from wrinkles when in repose. The stop should be reasonably well defined. Eyes - should be moderately well apart and should be round, bright and sparkling with intelligent expression, their color harmonizing with the color of the dog. Ears - should be set rather high, of medium size, rather wide at the base and tapering to a rounded point. They should be carried close to the head. Muzzle - should be long, deep and powerful. The lips clean, closely fitting the jaws. Clear faced or masked dogs are equally correct and neither is preferred. A clear face with black or brown/liver pigmentation only on nose, lips, and around the eyes, or a masked face with black or brown/liver pigmentation is correct as long as the color is not continuing with a solid mask over the eyes. A darker ear often accompanies the darker masked dog. Nose - should be black, brown or liver, in keeping with the color of the dog. No other colored nose is permissible. A black nose should be accompanied by dark eyes, a brown or liver nose with amber eyes. Bite - jaws level and strong with well-developed teeth, especially the canines or holders. Scissors bite preferred.

Neck, Topline, Body - The neck should be fairly long. It should be strong, free from throatiness and in balance with the dog. The chest should not be too wide, but very deep and capacious, ribs moderately well sprung, never rounded like barrel hoops (which would indicate want of speed). The back is powerful and firm with strong loins which are muscular and slightly arched. The tail should be strong at the insertion and generally tapering towards the end, free from coarseness. It should not be inserted too high or too low and should be carried with a slight curve upwards, never curled or gay.

Forequarters: The shoulders should be sloping, clean and muscular, denoting speed. Elbows close to the body. The forelegs should be perfectly straight, strong and heavy in bone. The feet should be compact with well-arched toes, round, tough, elastic pads, protected by hair between the toes and pads. Dewclaws may be removed.

Hindquarters: In the hind legs the muscles should be clean, well defined and hocks well down. Feet as in front.

Coat: Should be short and dense, sleek and glossy in appearance but neither woolly nor silky. Color: Light wheaten to red wheaten. A little white on the chest and toes permissible but excessive white there, on the belly or above the toes is undesirable. (see muzzle)

Ridge: The hallmark of this breed is the ridge on the back which is formed by the hair growing in the opposite direction to the rest of the coat. The ridge must be regarded as the characteristic feature of the breed. The ridge should be clearly defined, tapering and symmetrical. It should start immediately behind the shoulders and continue to a point between the prominence of the hips and should contain two identical crowns (whorls) directly opposite each other. The lower
edge of the crowns (whorls) should not extend further down the ridge than one third of the ridge. Disqualification - Ridgelessness. Serious Fault - One crown (whorl) or more than two crowns (whorls).

**Gait:** At the trot, the back is held level and the stride is efficient, long, free and unrestricted. Reach and drive expressing a perfect balance between power and elegance. At the chase, the Ridgeback demonstrates great coursing ability and endurance.

**Temperament**
Dignified and even tempered. Reserved with strangers.

**Disqualification:** *Ridgelessness.*

Approved January 12, 2010
Effective March 31, 2010
Official Standard of the Saluki

Head: Long and narrow, skull moderately wide between the ears, not domed, stop not pronounced, the whole showing great quality. Nose black or liver. Ears Long and covered with long silky hair hanging close to the skull and mobile. Eyes Dark to hazel and bright; large and oval, but not prominent. Teeth Strong and level.

Neck: Long, supple and well muscled.

Chest: Deep and moderately narrow.

Forequarters: Shoulders sloping and set well back, well muscled without being coarse. Forelegs Straight and long from the elbow to the knee.

Hindquarters: Strong, hipbones set well apart and stifle moderately bent, hocks low to the ground, showing galloping and jumping power.

Loin and Back: Back fairly broad, muscles slightly arched over loin.

Feet: Of moderate length, toes long and well arched, not splayed out, but at the same time not cat-footed; the whole being strong and supple and well feathered between the toes.

Tail: Long, set on low and carried naturally in a curve, well feathered on the underside with long silky hair, not bushy.

Coat: Smooth and of a soft silky texture, slight feather on the legs, feather at the back of the thighs and sometimes with slight woolly feather on the thigh and shoulder.

Colors: White, cream, fawn, golden, red, grizzle and tan, tricolor (white, black and tan) and black and tan.

General Appearance: The whole appearance of this breed should give an impression of grace and symmetry and of great speed and endurance coupled with strength and activity to enable it to kill gazelle or other quarry over deep sand or rocky mountains. The expression should be dignified and gentle with deep, faithful, far-seeing eyes. Dogs should average in height from 23 to 28 inches and bitches may be considerably smaller, this being very typical of the breed.

The Smooth Variety: In this variety the points should be the same with the exception of the coat, which has no feathering.
Official Standard of the Scottish Deerhound

Head: Should be broadest at the ears, narrowing slightly to the eyes, with the muzzle tapering more decidedly to the nose. The muzzle should be pointed, but the teeth and lips level. The head should be long, the skull flat rather than round with a very slight rise over the eyes but nothing approaching a stop. The hair on the skull should be moderately long and softer than the rest of the coat. The nose should be black (in some blue fawns-blue) and slightly aquiline. In lighter colored dogs the black muzzle is preferable. There should be a good mustache of rather silky hair and a fair beard.

Ears: Should be set on high; in repose, folded back like a Greyhound's, though raised above the head in excitement without losing the fold, and even in some cases semi-erect. A prick ear is bad. Big thick ears hanging flat to the head or heavily coated with long hair are bad faults. The ears should be soft, glossy, like a mouse's coat to the touch and the smaller the better. There should be no long coat or long fringe, but there is sometimes a silky, silvery coat on the body of the ear and the tip. On all Deerhounds, irrespective of color of coat, the ears should be black or dark colored.

Neck and Shoulders: The neck should be long—of a length befitting the Greyhound character of the dog. Extreme length is neither necessary nor desirable. Deerhounds do not stoop to their work like the Greyhounds. The mane, which every good specimen should have, sometimes detracts from the apparent length of the neck. The neck, however, must be strong as is necessary to hold a stag. The nape of the neck should be very prominent where the head is set on, and the throat clean cut at the angle and prominent. Shoulders should be well sloped; blades well back and not too much width between them. Loaded and straight shoulders are very bad faults.

Tail: Should be tolerably long, tapering and reaching to within 1½ inches of the ground and about 1½ inches below the hocks. Dropped perfectly down or curved when the Deerhound is still, when in motion or excited, curved, but in no instance lifted out of line of the back. It should be well covered with hair, on the inside, thick and wiry, underside longer and towards the end a slight fringe is not objectionable. A curl or ring tail is undesirable.

Eyes: Should be dark—generally dark brown, brown or hazel. A very light eye is not liked. The eye should be moderately full, with a soft look in repose, but a keen, far away look when the Deerhound is roused. Rims of eyelids should be black.

Body: General formation is that of a Greyhound of larger size and bone. Chest deep rather than broad but not too narrow or slab-sided. Good girth of chest is indicative of great lung power. The loin well arched and drooping to the tail. A straight back is not desirable, this formation being unsuited for uphill work, and very unsightly.

Legs and Feet: Legs should be broad and flat, and good broad forearms and elbows are desirable. Forelegs must, of course, be as straight as possible. Feet close and compact, with well-arranged toes. The hindquarters drooping, and as broad and powerful as possible, the hips being set wide apart. A narrow rear denotes lack of power. The stifles should be well bent, with great length from hip to hock, which should be broad and flat. Cowhocks, weak pasterns, straight stifles and splay feet are very bad faults.

Coat: The hair on the body, neck and quarters should be harsh and wiry about 3 or 4 inches long; that on the head, breast and belly much softer. There should be a slight fringe on the inside of the forelegs and hind legs but nothing approaching the "feather" of a Collie. A woolly coat is bad. Some good strains have a mixture of silky coat with the hard which is preferable to a woolly
coat. The climate of the United States tends to produce the mixed coat. The ideal coat is a thick, close-lying ragged coat, harsh or crisp to the touch.

**Color:** Is a matter of fancy, but the dark blue-gray is most preferred. Next come the darker and lighter grays or brindles, the darkest being generally preferred. Yellow and sandy red or red fawn, especially with black ears and muzzles, are equally high in estimation. This was the color of the oldest known strains—the McNeil and Chesthill Menzies. White is condemned by all authorities, but a white chest and white toes, occurring as they do in many of the darkest-colored dogs, are not objected to, although the less the better, for the Deerhound is a self-colored dog. A white blaze on the head, or a white collar, should entirely disqualify. The less white the better but a slight white tip to the stern occurs in some of the best strains.

**Height:** Height of Dogs - From 30 to 32 inches, or even more if there be symmetry without coarseness, which is rare. Height of Bitches - From 28 inches upwards. There is no objection to a bitch being large, unless too coarse, as even at her greatest height she does not approach that of the dog, and therefore could not be too big for work as overbig dogs are.

**Weight:** From 85 to 110 pounds in dogs, and from 75 to 95 pounds in bitches.

**Points of the Deerhound, Arranged in Order of Importance**
1. Typical—A Deerhound should resemble a rough-coated Greyhound of larger size and bone.
2. Movements—Easy, active and true.
3. As tall as possible consistent with quality.
4. Head—Long, level, well balanced, carried high.
5. Body—Long, very deep in brisket, well-sprung ribs and great breadth across hips.
6. Forelegs—Strong and quite straight, with elbows neither in nor out.
7. Thighs—Long and muscular, second thighs well muscled, stifles well bent.
8. Loins—Well arched, and belly well drawn up.
10. Feet—Close, compact, with well-knuckled toes.
11. Ears—Small (dark) with Greyhound-like carriage.
12. Eyes—Dark, moderately full.
15. Chest—Very deep but not too narrow.
16. Tail—Long and curved slightly, carried low.
17. Teeth—Strong and level.

**Disqualification:** *White blaze on the head, or a white collar.*

**Approved March, 1935**
Official Standard of the Sloughi

General Appearance: The Sloughi is a medium-large, short-haired, smooth-coated, athletic sighthound developed in North Africa (in the area including Morocco, Algeria, Tunisia, and Libya) to hunt game such as hare, fox, jackal, gazelle, and wild pigs. It is an ancient breed, treasured in North Africa for its hunting skills, speed, agility, and endurance over long distances. It is a robust, but elegant and racy, pursuit dog with no exaggeration of length of body or limbs, muscle development, angulation, nor curve of loin. The Sloughi is not a fragile dog, but is also a dog with class and grace. The attitude is noble and somewhat aloof, and the expression of the dark eyes is gentle and melancholy.

The Sloughi's head is long and elegant with drop ears. The body and legs show defined bony structure and strong, lean muscles. The skeletal structure is sturdy. The topline is essentially horizontal blending into a bony, gently sloping croup. The tail is long and carried low with an upward curve at the end.

Size, Proportion, Substance: A male Sloughi is very slightly taller, measured from the top of the withers to the ground, than it is long, measured from the point of the shoulder to the point of the buttocks. A female's body may be slightly longer, proportionally, than that of the male. Males are typically larger than females. Height at the withers for males is normally 26 to 29 inches. For females it is normally 24 to 27 inches. Somewhat taller Sloughis are allowed.

Head: In profile, the head is long and refined with a deep and sturdy character. From above, it has the shape of a long wedge, tapering from the cranial area to the tip of the nose. Expression - The expression is gentle, slightly sad, and melancholy. Eyes - The eyes are large, dark, well set in their sockets, and oval to almond-shaped. The eye color is shades of dark brown to dark amber. The eye rims are pigmented. Ears - The ears are set at about the level of the eye and droop close to the head when the animal is at rest. The ears are of medium size, triangular in shape, and slightly rounded at the tips. Disqualifications are ears erect, or small and folding backwards in a "rose ear." Skull - Viewed from above, the cranial area is rather broad, measuring approximately 4 to 5 inches between the ears, and is rounded at the back and curves harmoniously on the sides. In profile, the top part of the cranial area is flat, the brows are scarcely projecting, the frontal groove is hardly marked, and the occipital crest is barely visible. Stop - The stop is barely pronounced. Muzzle - The muzzle has the shape of an elongated wedge and forms about half the total length of the head. The jaws are strong and regular. Planes - The profile is straight, with the lines of the muzzle and skull approximately parallel. Nose - The nose is black and strong, not pinched. The planes of the nose and the muzzle are almost the same. The nose leather, not being supported by the skeletal structure, is slightly inclined down towards the tip. Lips - The lips are thin and supple, black or dark brown, and completely pigmented. Flews - The lips just cover the lower jaw. The corner of the mouth is very slightly visible. Bite - A scissor bite is preferable; a level bite is allowed. An overshot or undershot jaw is a disqualification. Teeth - Full Dentition; the teeth are healthy and strong.

Neck, Topline and Body: Neck - The neck is long and springs well up from the shoulders. It is slightly arched at the crest. Its length is similar to that of the head. It should be elegant and powerful. The skin is fine, tight, with no dewlap and the hair is very smooth. Topline - The topline of a Sloughi is level (horizontal) or essentially level between the withers and the hip bones; the hip bones may be slightly higher than the withers. The withers are apparent. Body - Chest - The chest is not too wide and almost, but not quite, reaches the level of the elbow. Ribs - The ribs are flat, long, and slightly curved in the posterior third of the chest. Underline - The underline starts as a straight line at the sternum and rises up in a smooth curve to the belly. Tuck-up - The belly is well tucked up. Back - The back is short, almost level (horizontal) between the withers and the hip bones. Loin - The loin is short, lean, wide, and slightly arched. Croup - The croup is bony and oblique with apparent hip bones that project above the line of the back to the same height as, or slightly higher than, the withers. Tail - The tail is long enough to reach the point of the hocks, thin, set in line with the croup, and carried low, at or below the line of the back, with a
typical upward curve at the tip when in the resting position. When excited, the upward-curved part of a Sloughi’s tail may rise above the line of the back.

**Forequarters:** Angulation - Well open. **Shoulders** - Shoulder Blades - The shoulder blades are long. **Legs** - The forelegs are straight, bony, and muscular. The forelegs appear long. Pasterns - The pasterns are slightly sloping, supple, and strong. **Dewclaws** - Dewclaws are present, but may be removed. **Feet** - The feet are lean and have the shape of an elongated oval. In many lightly-built Sloughis, the foot is shaped like a hare-foot. **Toes** - The toes are pointed forward with the middle two toes distinctly longer than the others. **Nails** - The nails are black or pigmented.

**Hindquarters:** Angulation - Open angulation, stifles and hocks well open. **Legs** - When showing, the hind legs should be left in their natural, upright position so that the level (horizontal) line of the back remains apparent. **Upper Thigh** - The upper thigh is lean, flat, and muscular and, at rest, is nearly vertical. Second Thigh - The second thigh is long and well muscled. **Hocks** (Rear Pastern) - Hocks are strong and well bent without closed angles. The rear pasterns are also strong. The tendons are well chiseled. **Dewclaws** - No rear dewclaws. **Feet** - The feet are lean and have the shape of an elongated oval. **Toes** - The toes are pointed forward with the middle two toes distinctly longer than the others. **Nails** - The nails are black or pigmented.

**Coat:** The coat of the Sloughi is always smooth. The hair is short, tight, and fine all over the body. The Sloughi is presented in natural condition. Disqualifications are coat other than short, tight, and smooth and/or feathering on the ears, tail, and/or legs.

**Color:** The coat colors are all shades of light sand (cream) to mahogany red fawn, with or without brindling or with or without black markings such as black mask, black ears, dark overlay, and black mantle, with no invasive white markings. Small to medium white marks on the chest or toes are allowed as is white, anywhere on the body, due to aging or scars. Disqualifications are color not in accordance with the standard and/or solid white extending above the toes or white anywhere else on the dog except the forechest.

**Gait:** The Sloughi has a supple, smooth, and effortless gait with long strides, covering plenty of ground. The tail is held low, the head at a moderate angle to the body.

**Temperament:** The Sloughi is a dog with class and grace. The attitude is noble and somewhat aloof.

**Summary of Disqualifications:** Ears erect, or small and folding backwards in a "rose ear." An overshot or undershot jaw. Coat too long and/or feathering on the ears, tail, and/or legs. Color not in accordance with the standard and/or solid white extending above the toes or white anywhere else on the dog except the forechest.

**Effective January 1, 2011**
Official Standard of the Treeing Walker Coonhound

General Appearance: Characteristics - Called 'the people's choice' among all coonhound breeds, the energetic Treeing Walker is perfectly suited for the task for which it was bred - tracking and treeing wild raccoons in their natural haunts. The breed's competitive spirit makes it an ideal choice for competitive coonhound events where the breed excels. The Treeing Walker Coonhound is alert, intelligent, active, courteous, and courageous with extreme endurance and the desire to perform.

Size, Weight, Proportion, Substance: Height - Slightly more at shoulders than at hips. Shoulders should measure: Males, 22 to 27 inches, Females, 20 to 25 inches. Balance is key with all of the parts coming together in proper balance to form the whole. Weight - Should be in proportion to dog's height. Working dogs are not to be penalized when shown, if slightly under weight.

Head: Skull - Should be medium length with the occipital bone prominent; cranium is to be broad and full. Fault-very flat narrow skull; having excess of bone; not in proportion to the body. Ears - Should be set moderately low and of medium length, reaching or nearly reaching to the tip of the nose; oval or round at the tip, hanging gracefully towards the muzzle. Fault - short ears set high on the head. Eyes - large, set well apart with soft hound-like expression, pleading and gentle; dark in color, brown or black. Fault - yellow or light eyes, protruding or small. Muzzle - Medium length and rather square; medium stop, neither Roman-nosed nor dish faced. Nostrils - any other color than black.

Neck, Topline, Body: Neck and Throat - clean with no excess of skin, neck of medium length, rising from the shoulders cleanly; strong but not loaded, smooth. Fault - short, thick neck carried in line with the shoulders; throatiness. Shoulder-blade sloping forward and downward at a 45 degree angle to the ground; presenting a laid back appearance, neither loaded nor heavy, providing freedom of movement and strength. Length of shoulder blade and upper arm to be equal. Chest and Ribs - Depth of chest is more important than width; descending to the approximate point of elbow. Ribs well sprung, never flat or slab-sided. Back and Loins - Strong, muscular back of moderate length; topline nearly level or sloping slightly from shoulder to rear. Faults - higher in the rear (hips) than at the withers, roached or sway-back. Tail - set moderately high, coming right off the topline, carried well up and saber-like. Curved gracefully up, tapered and moderately long without flag or excessive brush. Fault - having an excess of curve in tail; rat tail; excessive brush.

Forequarters: Forelegs - Straight and parallel to each other, from elbow to pastern. Pastern, from the joint to the top of the foot is strong and distinct, slightly slanting but standing almost perpendicular to the ground. Faults - out at the elbow, crooked forelegs, weak pasterns, knuckling over. Feet - thick pads, well arched toes giving a 'cat foot' appearance, tight. No rear dewclaws. Front dewclaws may be removed. Fault-flat, splayed feet.

Hindquarters: Hind Legs - Muscular and powerful with great propelling leverage. Well muscled thighs of considerable length. Stifles well bent. Clean hocks. Legs viewed from the rear are parallel. Defined angulation denotes endurance and power.

Coat: Smooth hair that is glossy and short, yet dense enough for protection while being a close and hard hound coat. Fault - too short or thin or too soft.

Color: Tri-colored is preferred, white, black and tan. White may be the predominant color with black marking and tan trim; or black may be the predominant color with white marking and tan
trim, such as a saddle back or blanket back. White with tan spots or white with black spots may be accepted. Fault—any other color combination will be penalized when shown.

**Gait:** Gait is smooth and effortless, free and balanced, showing good reach in the front with powerful drive in the rear quarters, producing efficient movement, covering ground effortlessly.

**Note** - Working dogs will not be penalized for scars or blemishes due to hunting injuries.

Approved July 8, 2008  
Effective January 1, 2009
Official Standard of the Whippet

General Appearance: A medium size sighthound giving the appearance of elegance and fitness, denoting great speed, power and balance without coarseness. A true sporting hound that covers a maximum of distance with a minimum of lost motion. Should convey an impression of beautifully balanced muscular power and strength, combined with great elegance and grace of outline. Symmetry of outline, muscular development and powerful gait are the main considerations; the dog being built for speed and work, all forms of exaggeration should be avoided.

Size, Proportion, Substance: Ideal height for dogs, 19 to 22 inches; for bitches, 18 to 21 inches, measured at the highest point of the withers. More than one-half inch above or below the stated limits will disqualify. Length from forechest to buttocks equal to or slightly greater than height at the withers. Moderate bone throughout.

Head: Keen intelligent alert expression. Eyes large, round to oval in shape. Small and/or almond shaped eyes are undesirable and are to be faulted. Eyes to be dark brown to nearly black in color. Eye color can vary with coat color, but regardless of coat color dark eyes are always preferred. Light eyes are undesirable and yellow eyes are to be strictly penalized. Blue eye(s) or any portion of blue in the eye(s), as well as both eyes not being of the same color shall disqualify. Fully pigmented eye rims are desirable. Rose ears, small, fine in texture; in repose, thrown back and folded along neck. Fold should be maintained when at attention. Erect ears should be severely penalized. Skull long and lean, fairly wide between the ears, scarcely perceptible stop. Muzzle should be long and powerful, denoting great strength of bite, without coarseness. Lack of underjaw should be strictly penalized. Nose leather to be entirely and uniformly pigmented. Color to be black, dark blue or dark brown, both so dark so as to appear nearly black. Teeth of upper jaw should fit closely over teeth of lower jaw creating a scissors bite. Teeth should be white and strong. Undershot shall disqualify. Overshot one-quarter inch or more shall disqualify.

Neck, Topline, Body: Neck long, clean and muscular, well arched with no suggestion of throatiness, widening gracefully into the top of the shoulder. A short thick neck, or a ewe neck, should be penalized. The back is broad, firm and well muscled, having length over the loin. The backline runs smoothly from the withers with a graceful natural arch, not too accentuated, beginning over the loin and carrying through over the croup; the arch is continuous without flatness. A dip behind shoulder blades, wheelback, flat back, or a steep or flat croup should be penalized. Brisket very deep, reaching as nearly as possible to the point of the elbow. Ribs well sprung but with no suggestion of barrel shape. The space between the forelegs is filled in so that there is no appearance of a hollow between them. There is a definite tuckup of the underline. The tail long and tapering, reaching to at least the inside of the hock when measured down along the hind leg. When the dog is in motion, the tail is carried low with only a gentle upward curve; tail should not be carried higher than top of back.

Forequarters: Shoulder blade long, well laid back, with flat muscles, allowing for moderate space between shoulder blades at peak of withers. Upper arm of equal length, placed so that the elbow falls directly under the withers. The points of the elbows should point neither in nor out, but straight back. A steep shoulder, short upper arm, a heavily muscled or loaded shoulder, or a very narrow shoulder, all of which restrict low free movement, should be strictly penalized. Forelegs straight, giving appearance of strength and substance of bone. Pasterns strong, slightly bent and flexible. Bowed legs, tied-in
elbows, legs lacking substance, legs set far under the body so as to create an exaggerated forechest, weak or upright pasterns should be strictly penalized.
Both front and rear feet must be well formed with hard, thick pads. Feet more hare than cat, but both are acceptable. Flat, splayed or soft feet without thick hard pads should be strictly penalized. Toes should be long, close and well arched. Nails strong and naturally short or of moderate length. Dewclaws may be removed.

**Hindquarters:** Long and powerful. The thighs are broad and muscular, stifles well bent; muscles are long and flat and carry well down toward the hock. The hocks are well let down and close to the ground. Sickle or cow hocks should be strictly penalized.

**Coat:** Short, close, smooth and firm in texture. Any other coat shall be a disqualification. Old scars and injuries, the result of work or accident, should not be allowed to prejudice the dog's chance in the show ring.

**Color:** Color immaterial.

**Gait:** Low, free moving and smooth, with reach in the forequarters and strong drive in the hindquarters. The dog has great freedom of action when viewed from the side; the forelegs move forward close to the ground to give a long, low reach; the hind legs have strong propelling power. When moving and viewed from front or rear, legs should turn neither in nor out, nor should feet cross or interfere with each other. Lack of front reach or rear drive, or a short, hackney gait with high wrist action, should be strictly penalized. Crossing in front or moving too close should be strictly penalized.

**Temperament:** Amiable, friendly, gentle, but capable of great intensity during sporting pursuits.

**Disqualifications:** More than one-half inch above or below stated height limits. Blue eye(s), any portion of blue in the eye(s), eyes not of the same color. Undershot. Overshot one-quarter inch or more. Any coat other than short, close, smooth and firm in texture.
