PROPOSED KOMONDOR STANDARD FOR COMMENT:
In accordance with the Guidelines for Breed Standard Revisions this is being published to receive any comments prior to the balloting of the club membership. Any comments may be forwarded directly to:

Mari-Beth O’Neill
AVP Sport Services
mbo@akc.org

GENERAL APPEARANCE
The Komondor is characterized by imposing strength, dignity, courageous demeanor, and pleasing conformation. He is a large, muscular dog with plenty of bone and substance, covered with an unusual, heavy coat of white cords. The working Komondor lives during the greater part of the year in the open, and his coat serves to help him blend in with his flock and to protect him from extremes of weather and beasts of prey. 

Nature and Characteristics: The Komondor is a flock guardian, not a herder. Originally developed in Hungary to guard large herds of animals on the open plains, the Komondor was charged with protecting the herd by himself, with no assistance and no commands from his master. The mature, experienced dog tends to stay close to his charges, whether a flock or family; he is unlikely to be drawn away from them in chase, and typically doesn’t wander far. Though very sensitive to the desires of his master, heavy-handed training will produce a stubborn, unhappy Komondor. While reserved with strangers, the Komondor is demonstrative with those he loves, selflessly devoted to his family and his charges, and will defend them against any attack. The combination of this devotion to all things dear to him and the desire to take responsibility for them produces an excellent guardian of herds or home, vigilant, courageous, and very faithful.

SIZE, PROPORTION, SUBSTANCE
Dogs 27½ inches and up at the withers; bitches 25½ inches and up at the withers. Dogs are approximately 100 pounds and up, bitches, approximately 80 pounds and up at maturity, with plenty of bone and substance. While large size is important, type, character, symmetry, movement and ruggedness are of the greatest importance and are on no account to be sacrificed for size alone.

The body is slightly longer than the withers. Height below the minimum is a fault.

HEAD
The head is large. The length of the head from occiput to tip of nose is approximately 2/5 the height of the dog at the withers. The skin around the eyes and on the muzzle is dark.

Eyes: Medium-sized and almond-shaped, not too deeply set. The iris of the eye is dark brown. Edges of the eyelids are gray or black. Light eyes are a fault. Blue eyes are a disqualification. Ears: In shape the ear is an elongated triangle with a slightly rounded tip. Medium-set and hanging and long enough to reach to the inner corner of the eye on the opposite side of the head. Erect ears or ears that move toward an erect position are a fault. Skull: The skull is broad with well-developed arches over the eyes. The occiput is fairly well-developed and the stop is moderate. Muzzle: The muzzle is wide, coarse, and truncated. Measured from inner corner of the eye to tip of nose the muzzle is 2/5 of the total length of the head. The top of the muzzle is straight and is parallel to the top of the skull. Undertjaw is well-developed and broad. Lips are tight and are black in color. Ideally gums and palate are dark or black. Nose: Nose is wide and the front of the nose forms a right angle with the top of the muzzle. The nostrils are wide. The nose is black. A dark gray or dark brown nose is not desirable but is acceptable. A flesh-colored nose is a disqualification.

Bite: Bite is scissors; a level bite is acceptable. A distinctly undershot or overshot bite is a fault. Dropped lower incisors, in an otherwise normal bite, are not indicative of a skeletal malocclusion and should be considered as only a minor deviation. Full dentition preferred.

NECK
Muscular, of medium length, moderately arched, with no dewlap. The head erect.

TOPLINE
The back is level and strong.

BODY
Characterized by a powerful, deep chest, which is muscular and proportionately wide. The breast is broad and well-muscled. The belly is somewhat drawn up at the rear. The rump is wide, muscular, and slopes slightly towards the root of the tail. Softness or lack of good muscle tone is a fault.

TAIL
A continuation of the rump line, hanging, and long enough to reach the hocks. Slightly curved upwards and/or to one side at its end. Even when the dog is moving or excited, the greater part of the tail is raised no higher than the level of the back. A short or curly tail is a fault.

FOREQUARTERS
Shoulders are well laid back. Forelegs straight, well-boned, and muscular. Viewed from any side, the legs are like vertical columns. The upper arms are carried close to the body, without loose elbows.
FEET
Strong, rather large, and with close, well-arched toes. Pads are hard, elastic, and black or gray. Ideally, nails are black or gray, although light nails are acceptable.

HINDQUARTERS
The steely, strong bone structure is covered with highly-developed muscles. The legs are straight as viewed from the rear. stifles are well-bent. Rear dewclaws must be removed.

COAT
Characteristic of the breed is the dense, protective coat. The puppy coat is relatively soft, but it shows a tendency to fall into cord-like curls. The young adult coat, or intermediate coat, consists of very short cords next to the skin which may be obscured by the sometimes lumpy looking fluff on the outer ends of the cords. The mature coat consists of a dense, soft, woolly undercoat much like the puppy coat, and a coarser outer coat that is wavy or curly. The coarser hairs of the outer coat trap the softer undercoat, forming permanent, strong cords that are felt-like to the touch. A grown dog is entirely covered with a heavy coat of these tassel-like cords, which form naturally. It must be remembered that the length of the Komondor’s coat is a function of age, and a younger dog must never be penalized for having a shorter coat. Straight or silky coat is a fault. Failure of the coat to cord by two years of age is a disqualification. Short, smooth coat on both head and legs is a disqualification.

COLOR
Color of the coat is white, but not always the pure white of a brushed coat. A small amount of cream or buff shading is sometimes seen in puppies, but fades with maturity. In the ideal specimen the skin is gray. Pink skin is not desirable but is acceptable. Color other than white, with the exception of small amounts of cream or buff in puppies, is a disqualification.

GAIT
Light, leisurely and balanced. The Komondor takes long strides, is very agile and light on his feet. The head is carried slightly forward when the dog trots.

KOMONDOR. Any deviation should be penalized in direct proportion to the extent of that deviation. Extreme deviation in any part should be penalized to the extent that the dog is effectively eliminated from competition.

DISQUALIFICATIONS
Blue eyes.
Flesh-colored nose.
Failure of the coat to cord by two years of age.
Short, smooth coat on both head and legs.
Color other than white, with the exception of small amounts of cream or buff in puppies.
